

TM&AC - Winter 2017/2018

velocities and accelerations in planar mechanisms EXAMPLE

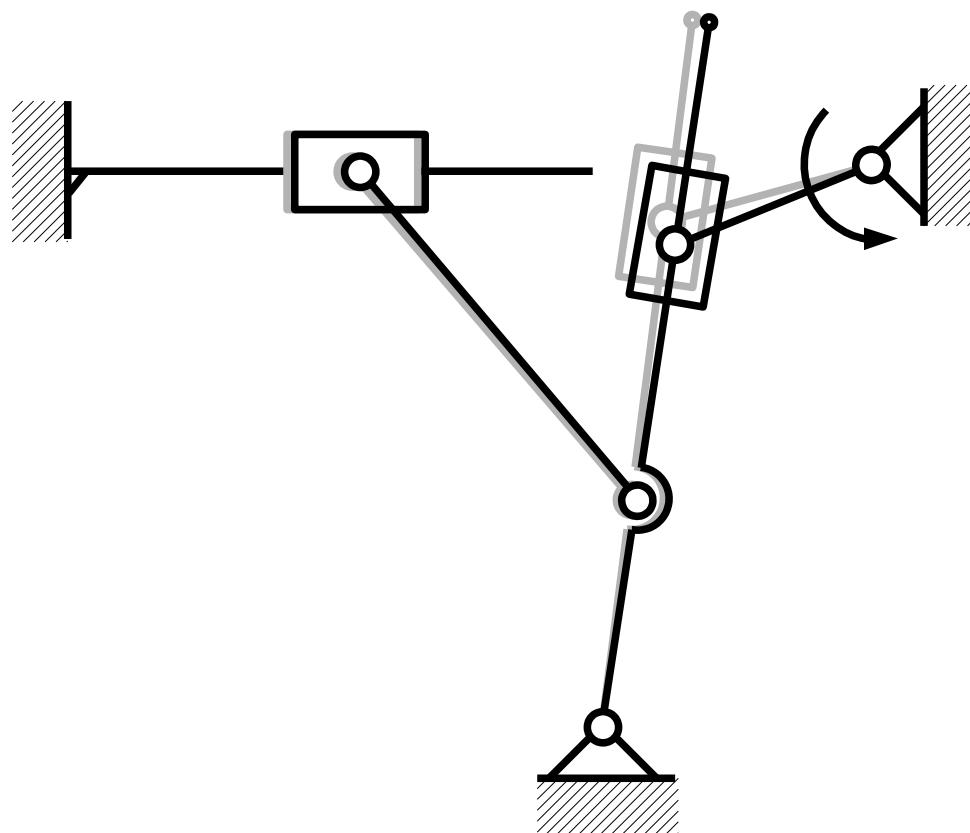

Given: mechanism geometry and constant angular velocity ω of driven element.

How it works?

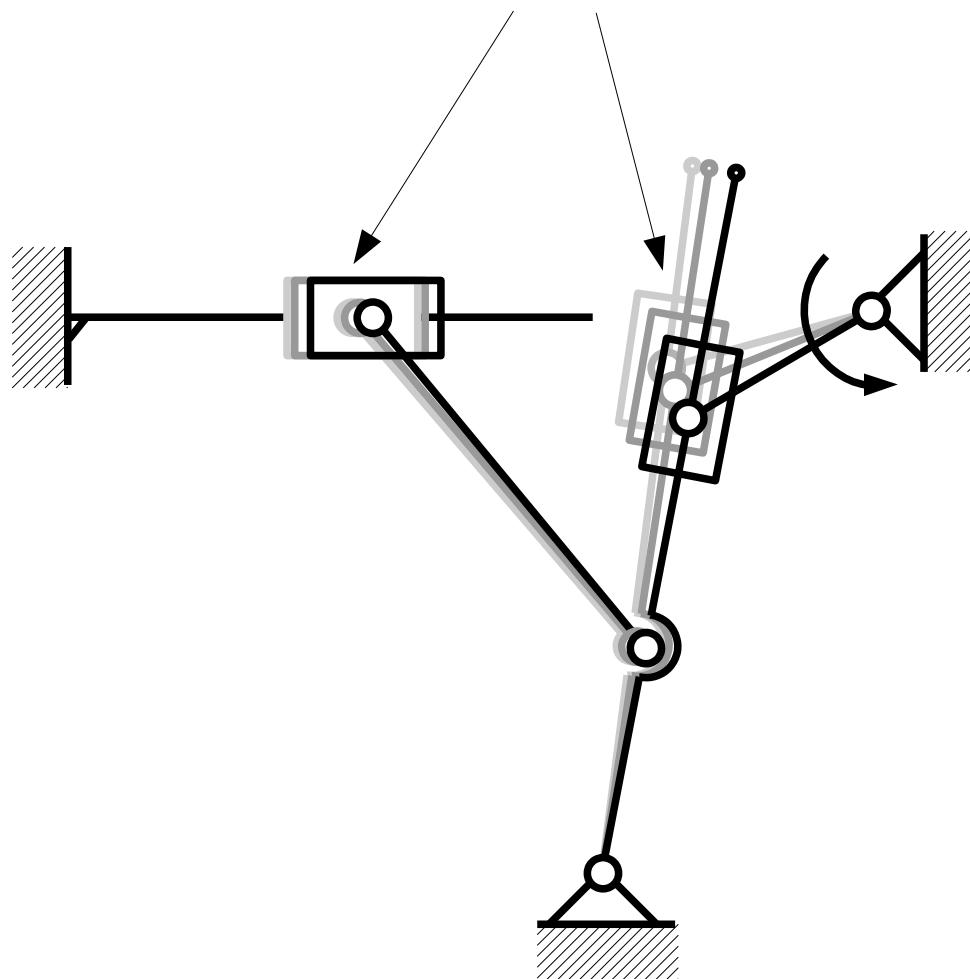

How it works?

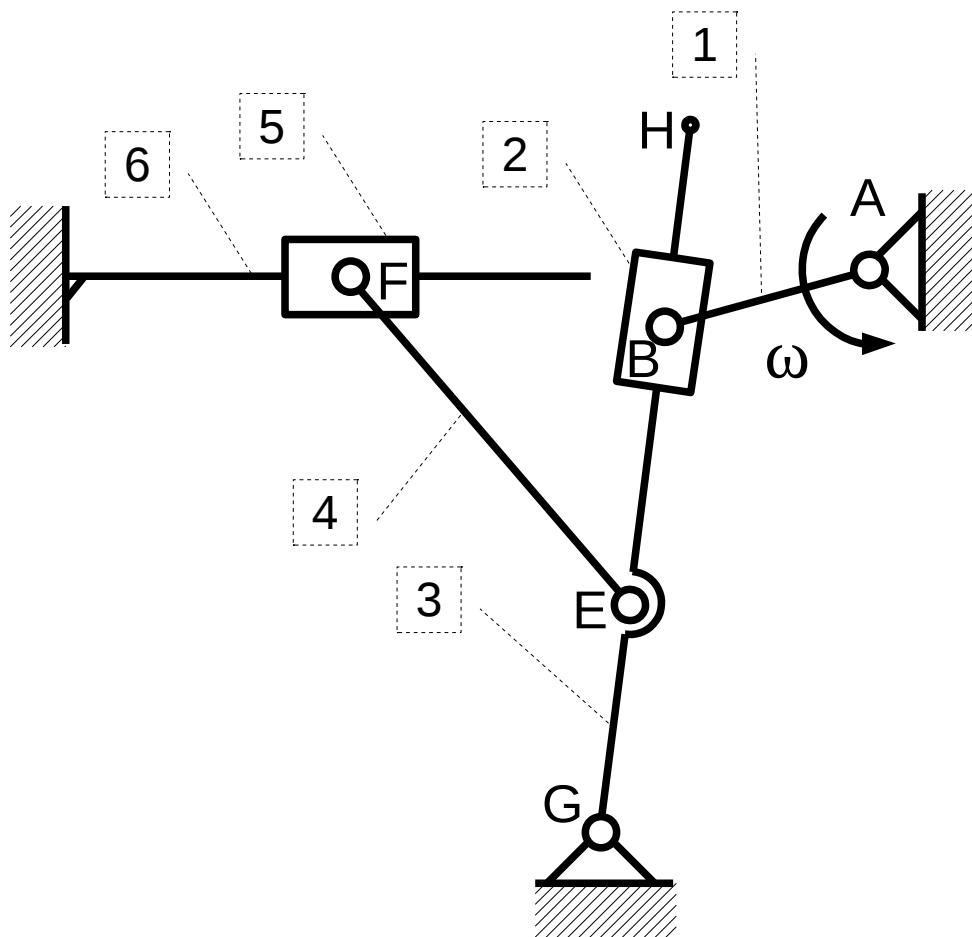

How it works?

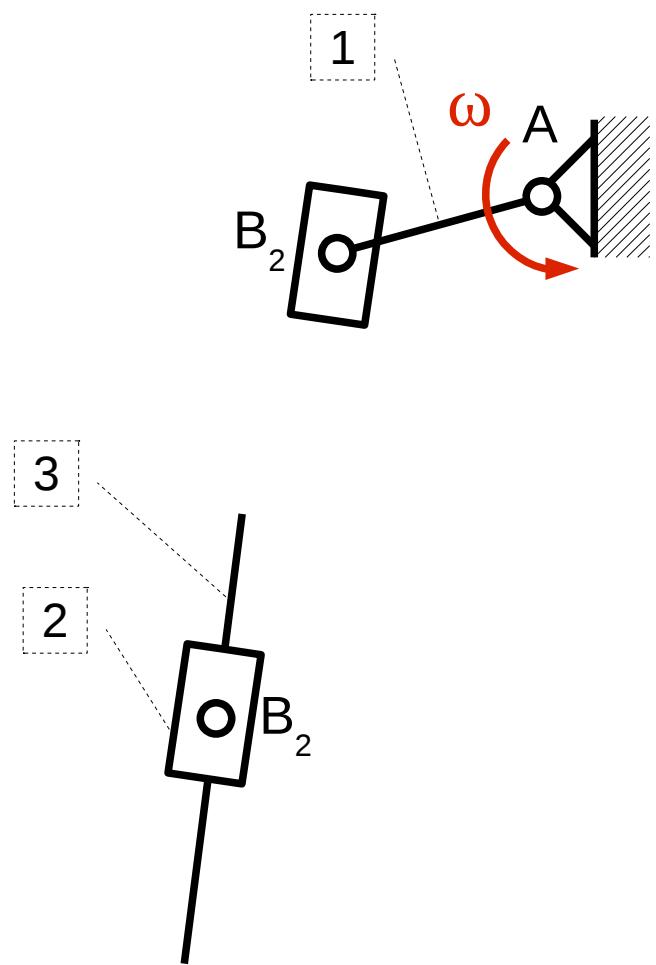

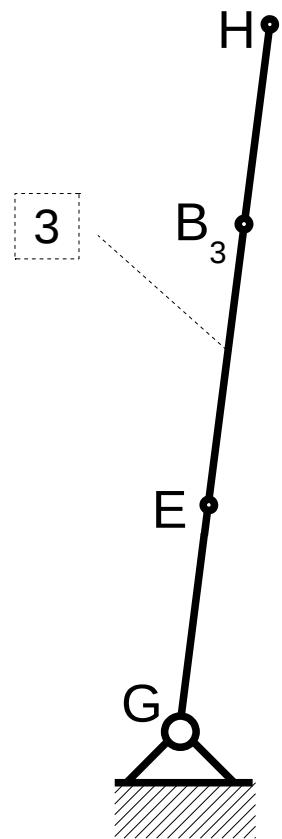

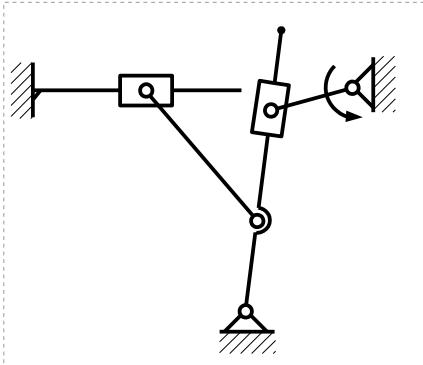

notice relative motion

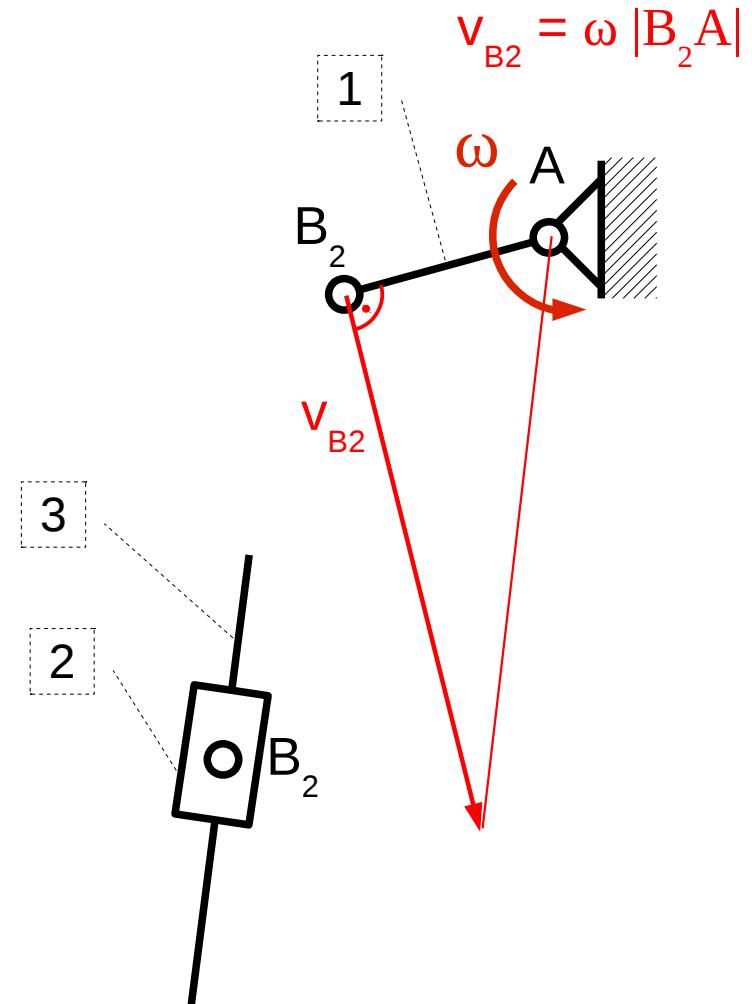

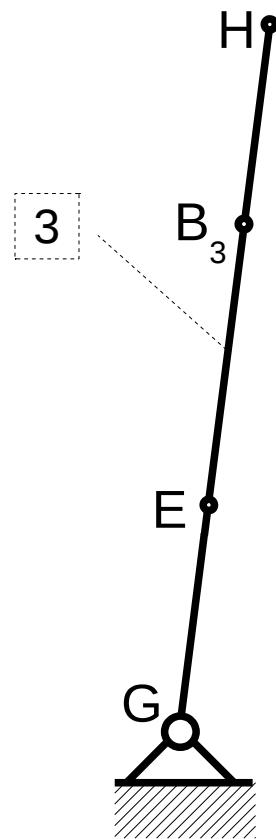

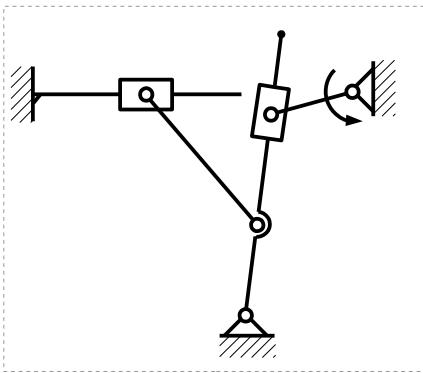

For given mechanism's orientation
denote elements and characteristic points

Because of relative motion of the slider 2 along the rod 3
denote point B_2 fixed with slider
and B_3 fixed with rod

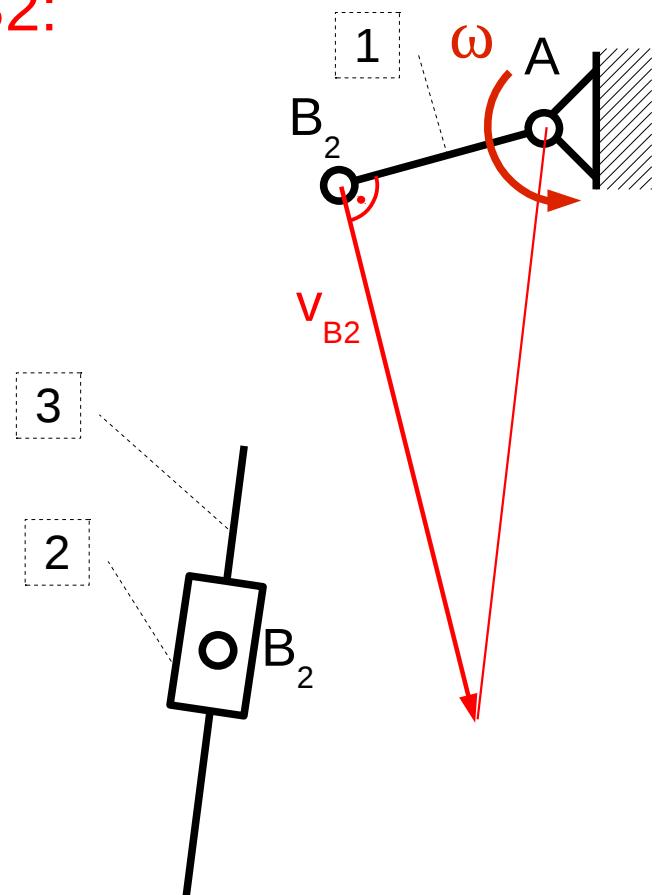

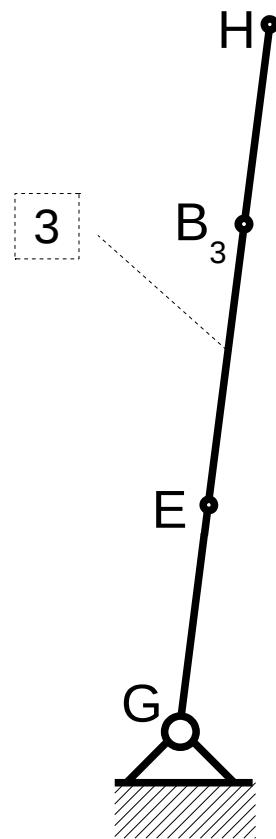

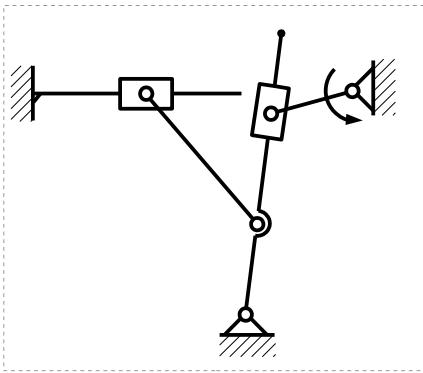

Determine the velocity of the 1st element

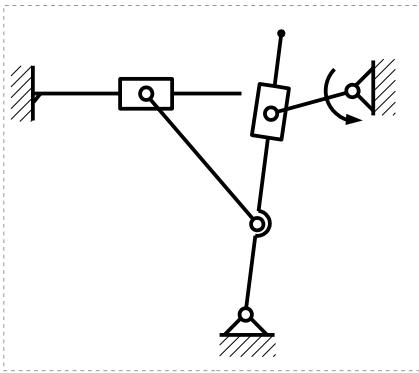

Let us assume:
 relative motion - movement of the slider 2 along the rod 3
 reference frame motion (transportation) – movement of the rod 3

Global velocity of the B2:

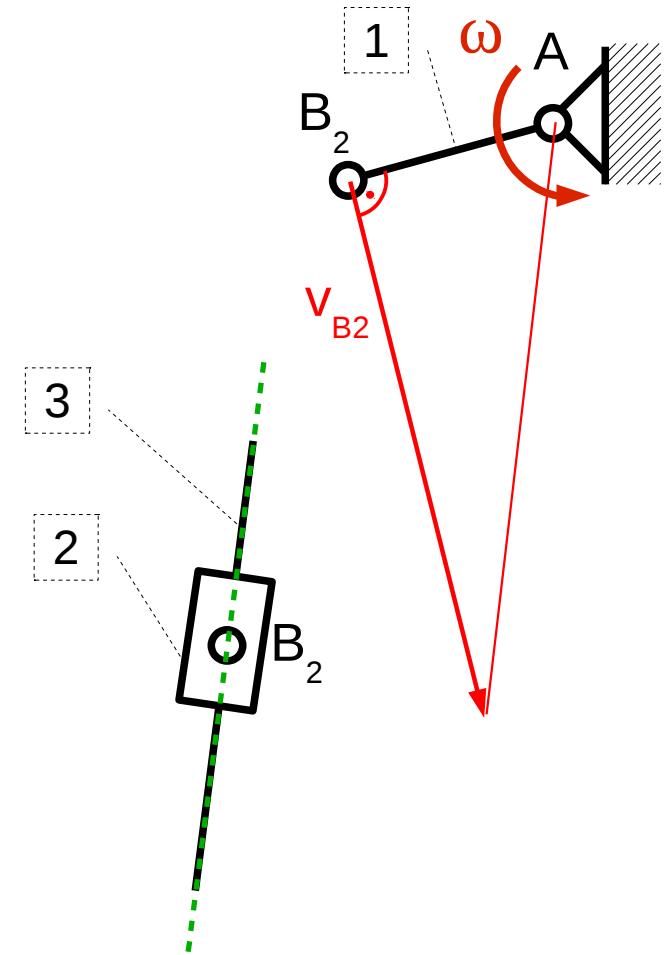

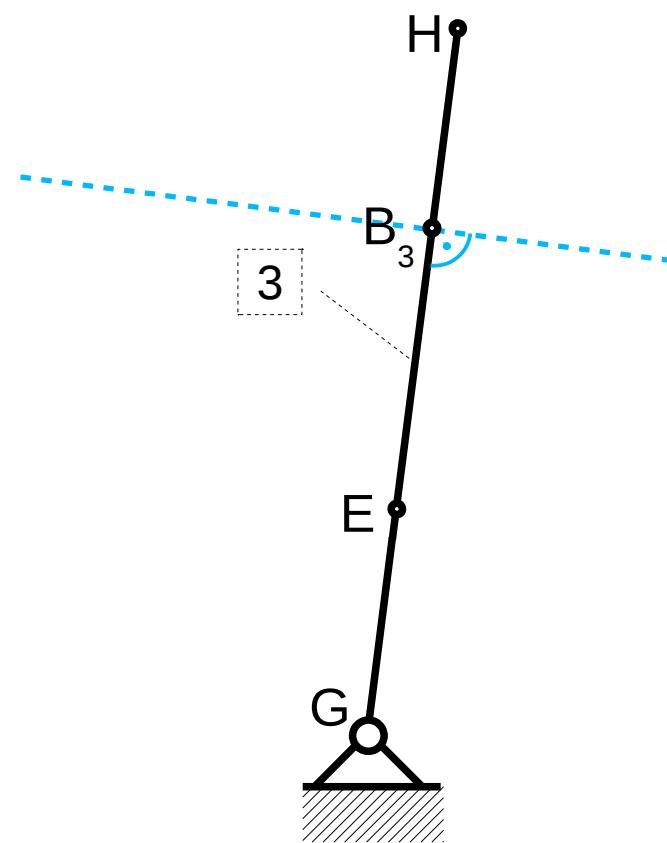

$$v_{B2} = v_{B3} + v_{B2B3}$$

velocities' directions...

$$\frac{V_{B2}}{\perp 1} = \frac{V_{B3}}{\perp 3} + \frac{V_{B2B3}}{\parallel 3}$$

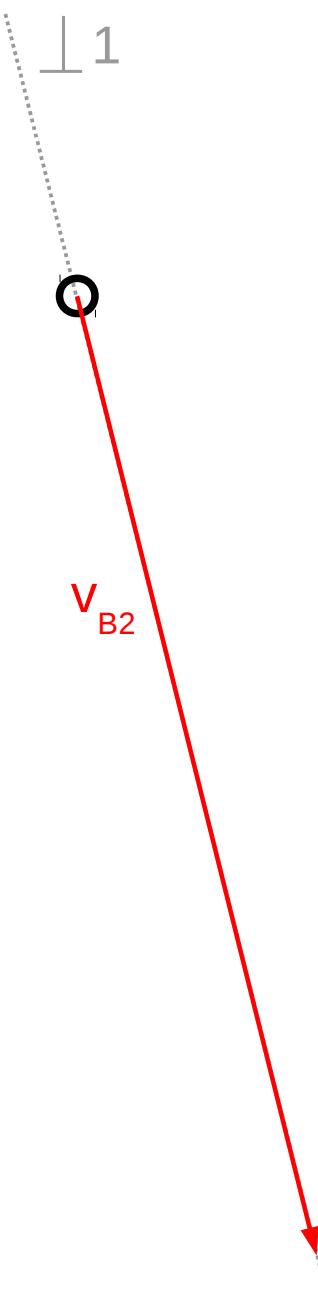

Velocity scheme

$$\underline{\underline{v}}_{B2} = \frac{v_{B3}}{\perp 3} + \frac{v_{B2B3}}{\parallel 3}$$

O

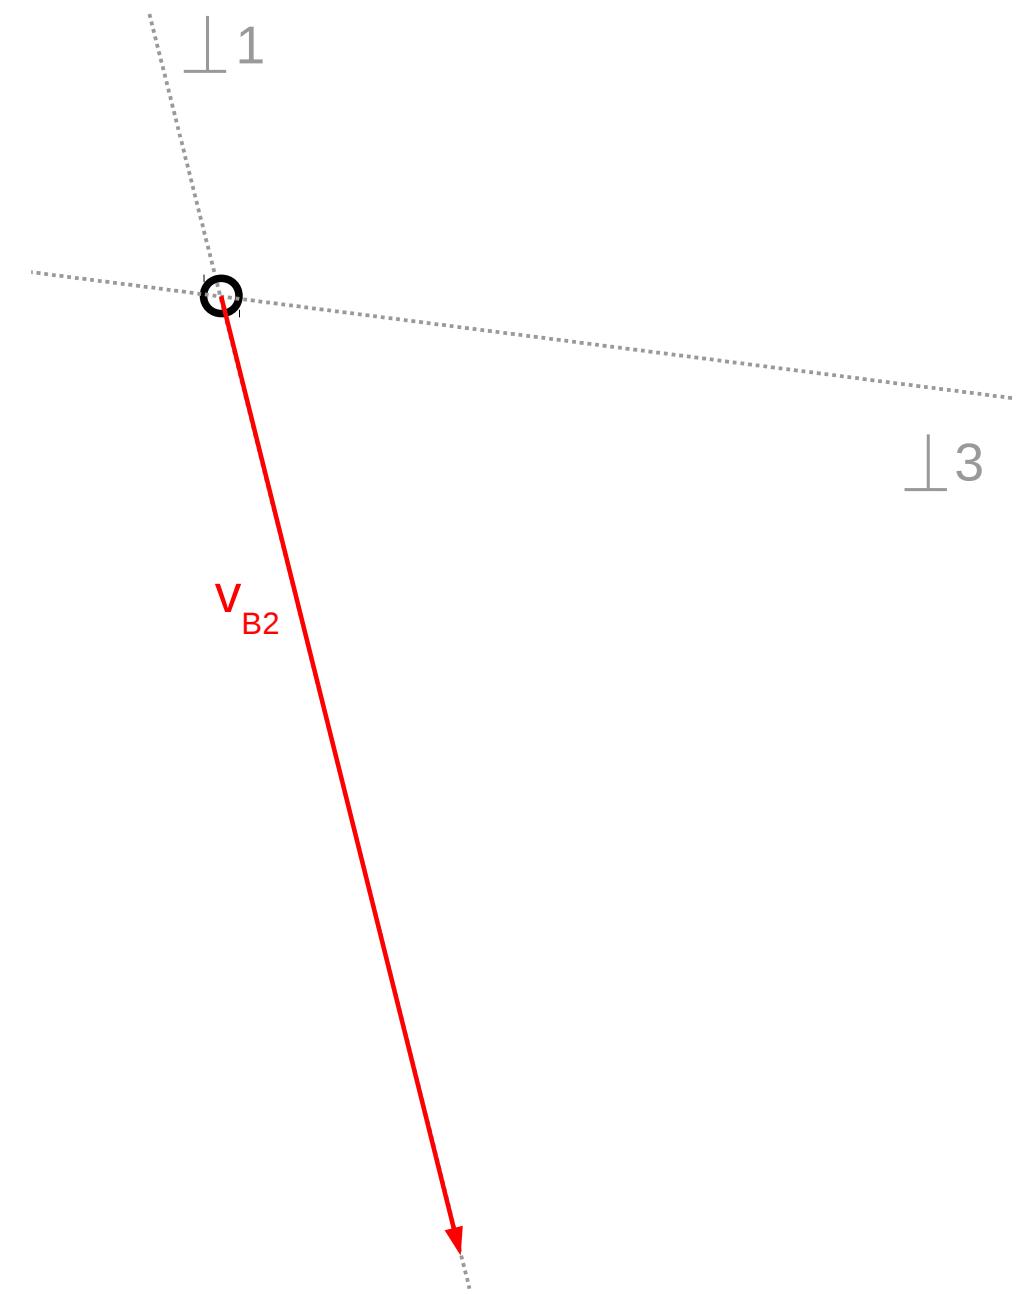

Velocity scheme

$$\frac{\underline{v}_{B2}}{\perp 1} = \frac{\underline{v}_{B3}}{\perp 3} + \frac{\underline{v}_{B2B3}}{\parallel 3}$$

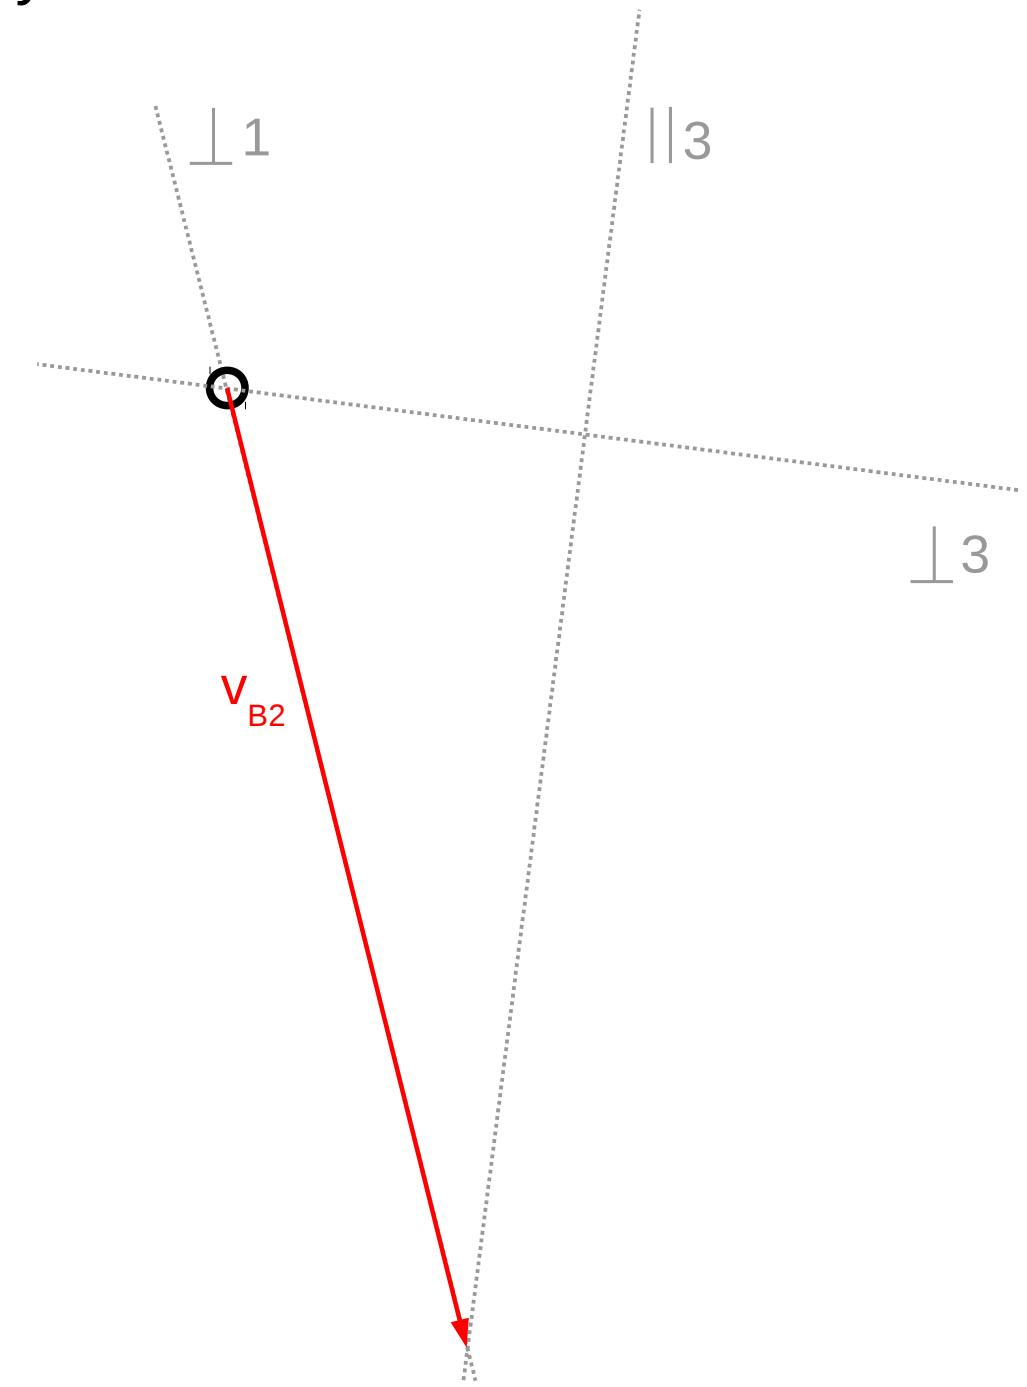

Velocity scheme

$$\frac{v_{B2}}{\perp 1} = \frac{v_{B3}}{\perp 3} + \frac{v_{B2B3}}{\parallel 3}$$

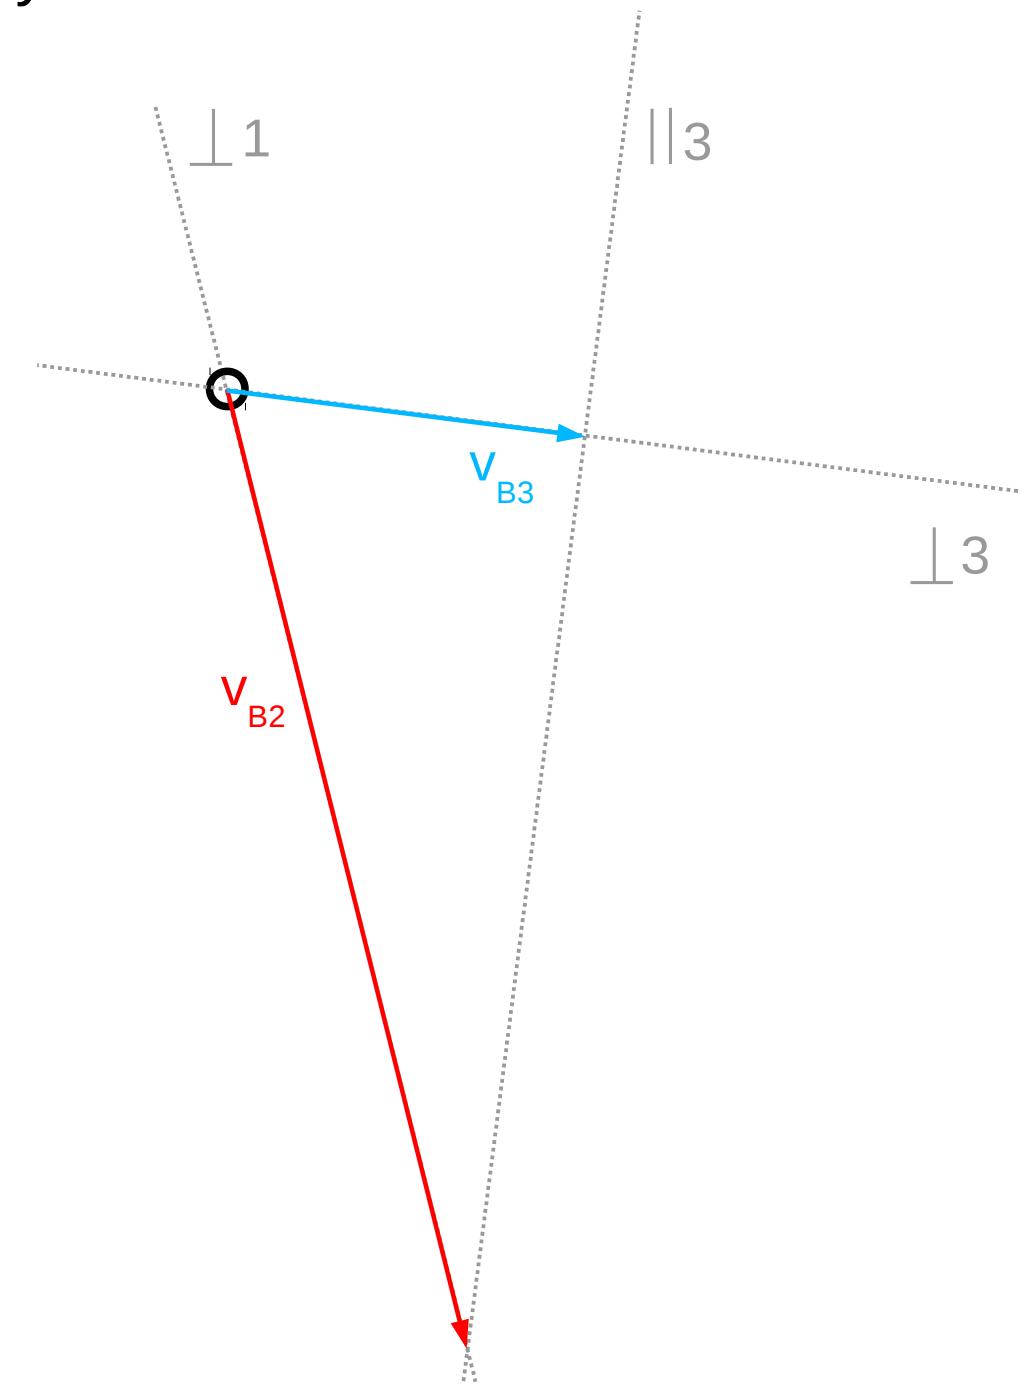

Velocity scheme

$$\frac{v_{B2}}{\perp 1} = \frac{v_{B3}}{\perp 3} + \frac{v_{B2B3}}{\parallel 3}$$

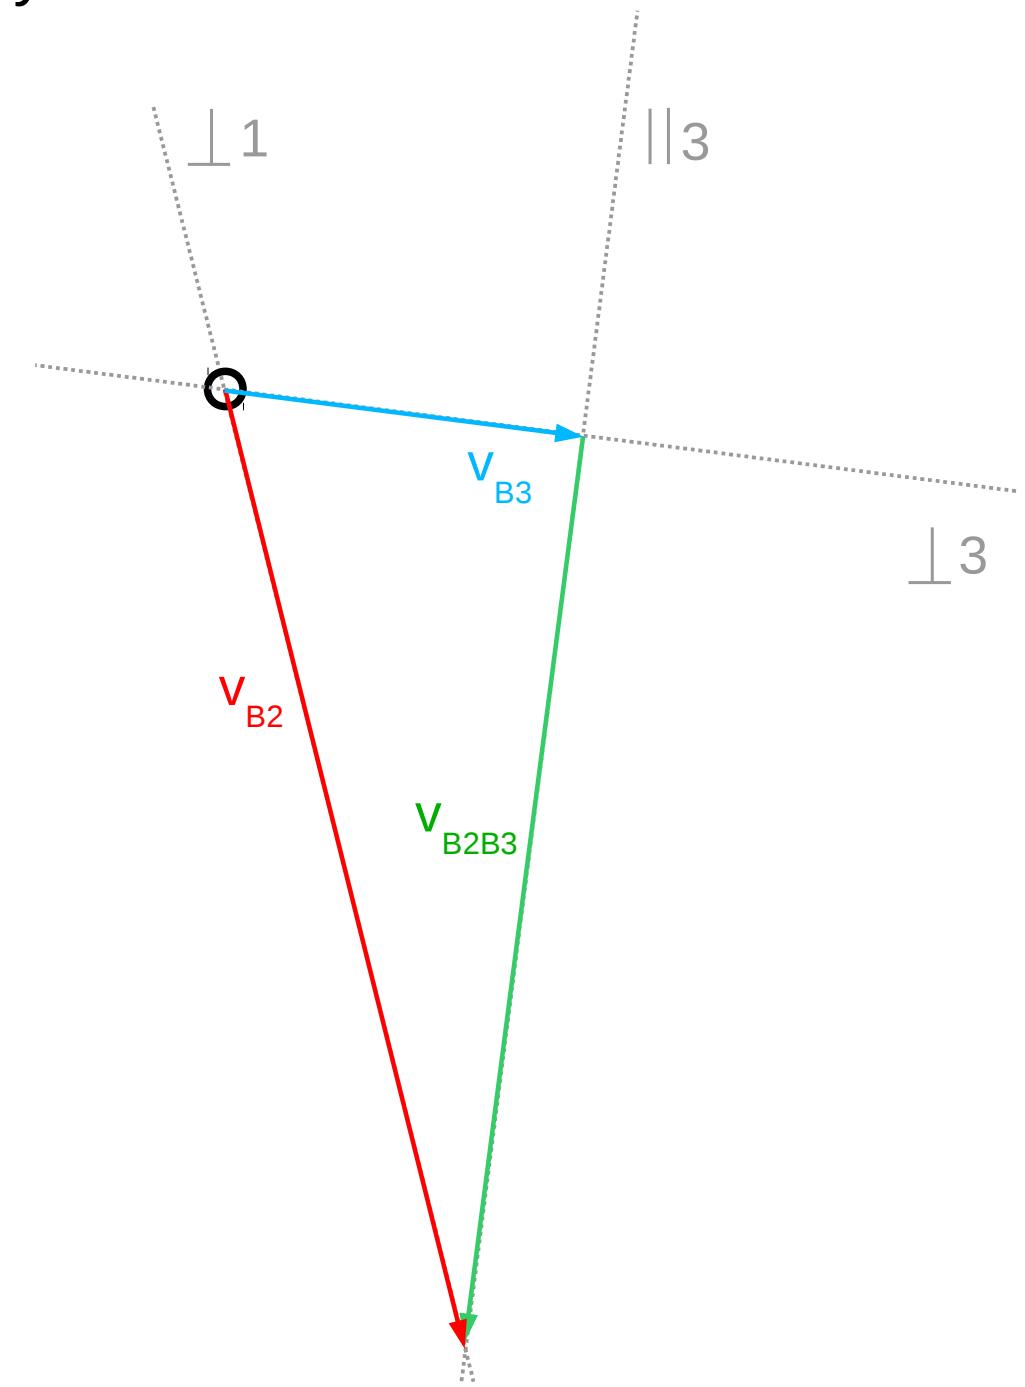

Velocity scheme

$$\frac{v_{B2}}{\perp 1} = \frac{v_{B3}}{\perp 3} + \frac{v_{B2B3}}{\parallel 3}$$

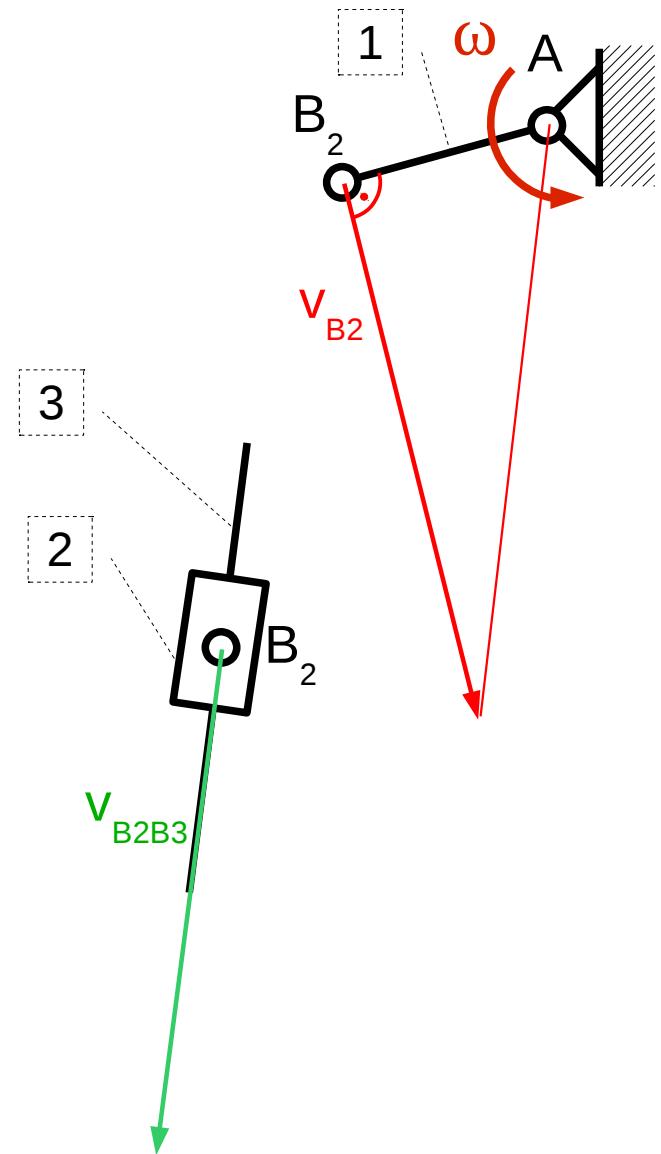

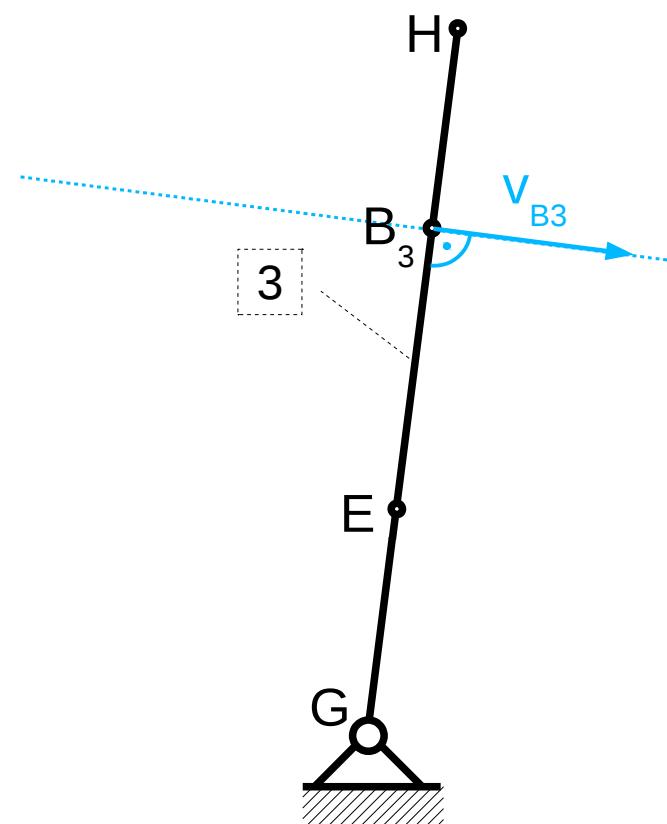

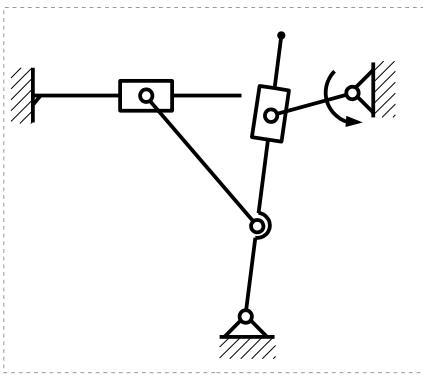

Velocity scheme

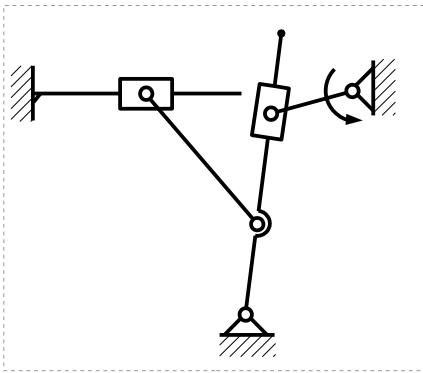

$$\frac{v_{B2}}{\perp 1} = \frac{v_{B3}}{\perp 3} + \frac{v_{B2B3}}{\parallel 3}$$

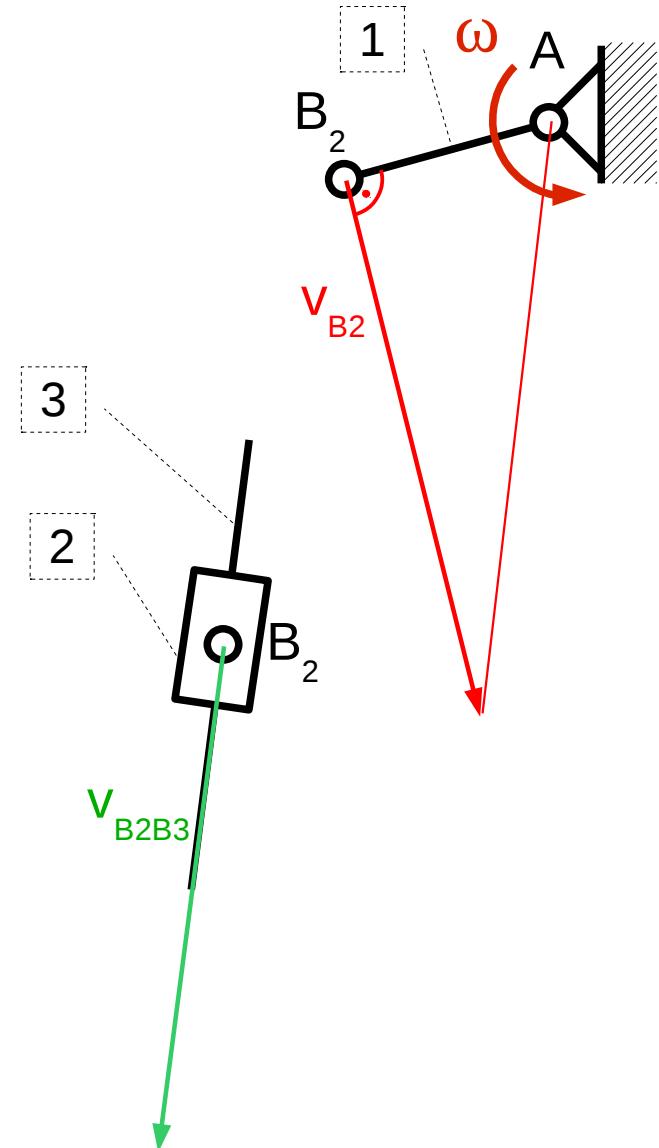

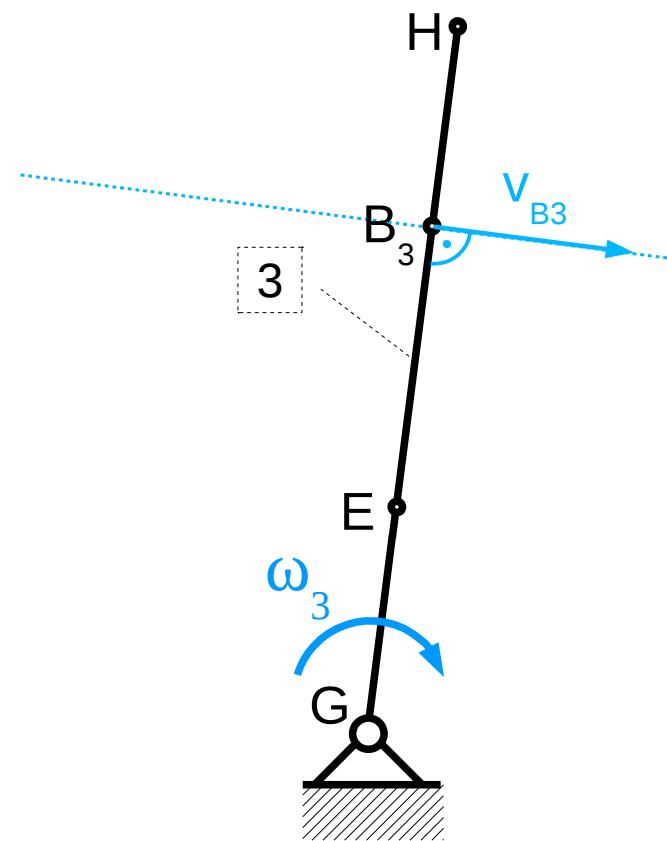

We just found velocities in relative motion.

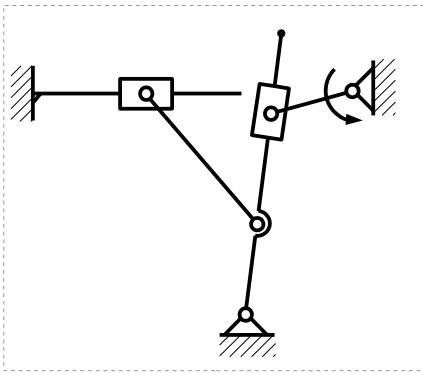

From the B_3 velocity we obtain angular velocity of the rod 3

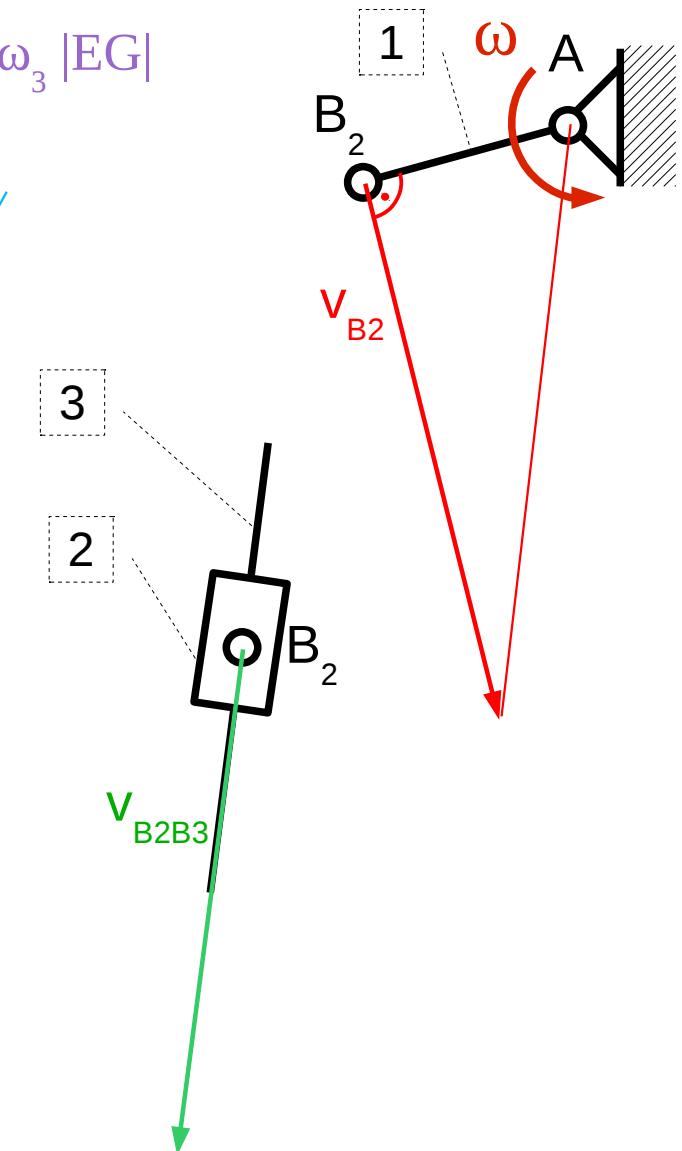

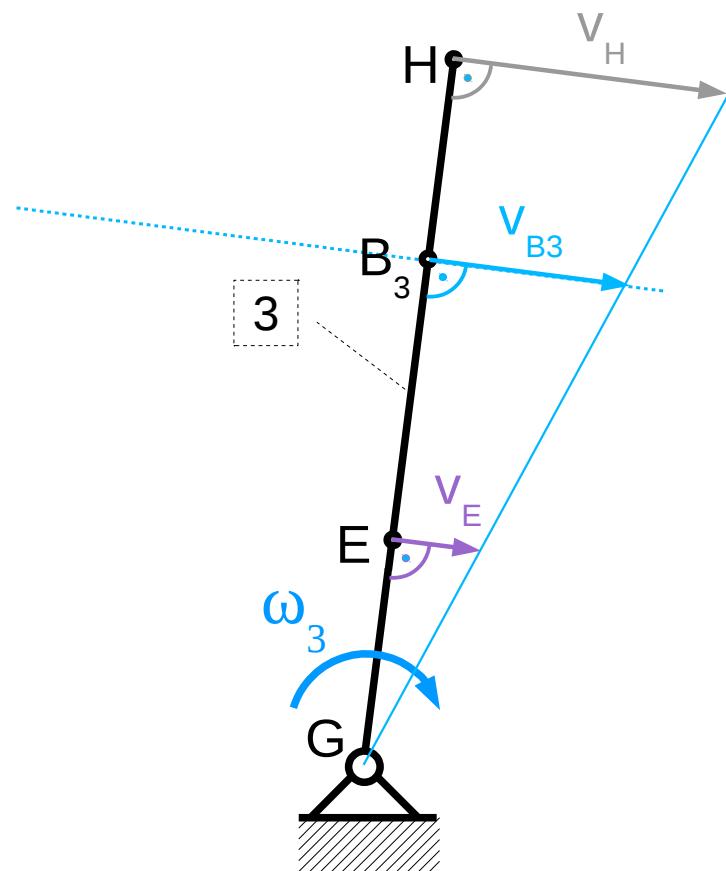

$$\omega_3 = \frac{|v_{B_3}|}{|B_3 G|}$$

With ω we can find now velocities of point E or H.

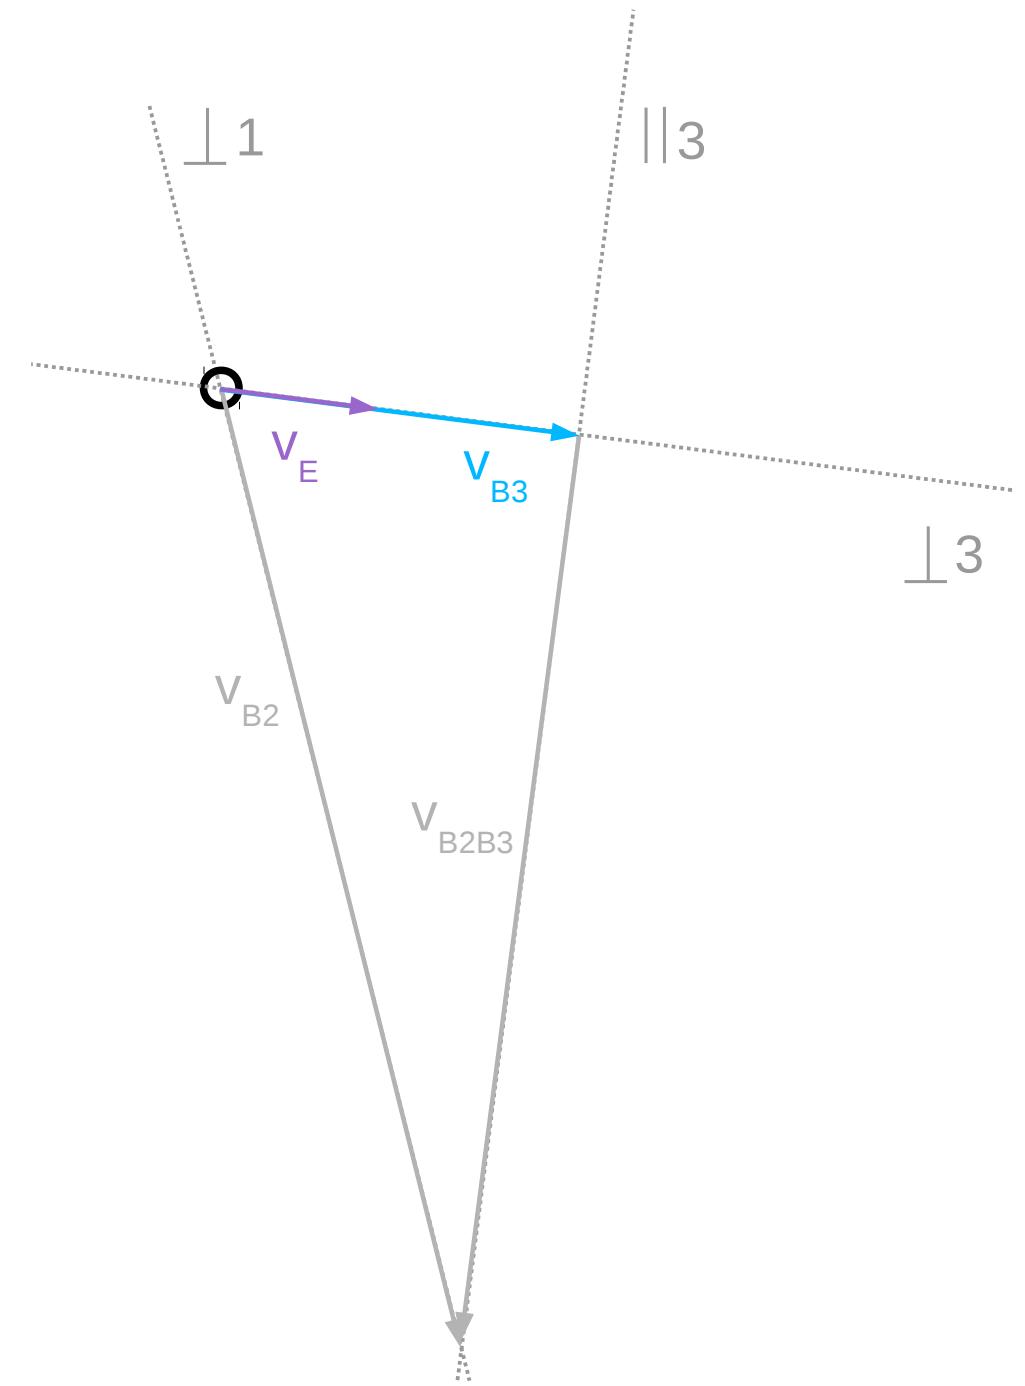

$$\omega_3 = \frac{|v_{B_3}|}{|B_3 G|} \quad v_E = \omega_3 |EG|$$

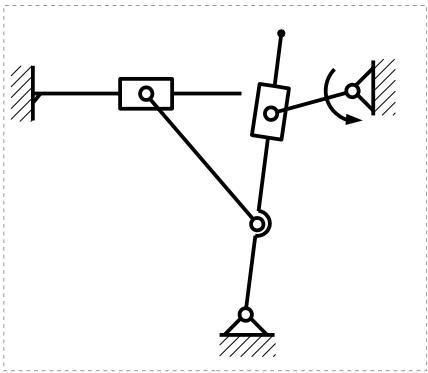

Velocity scheme cont.

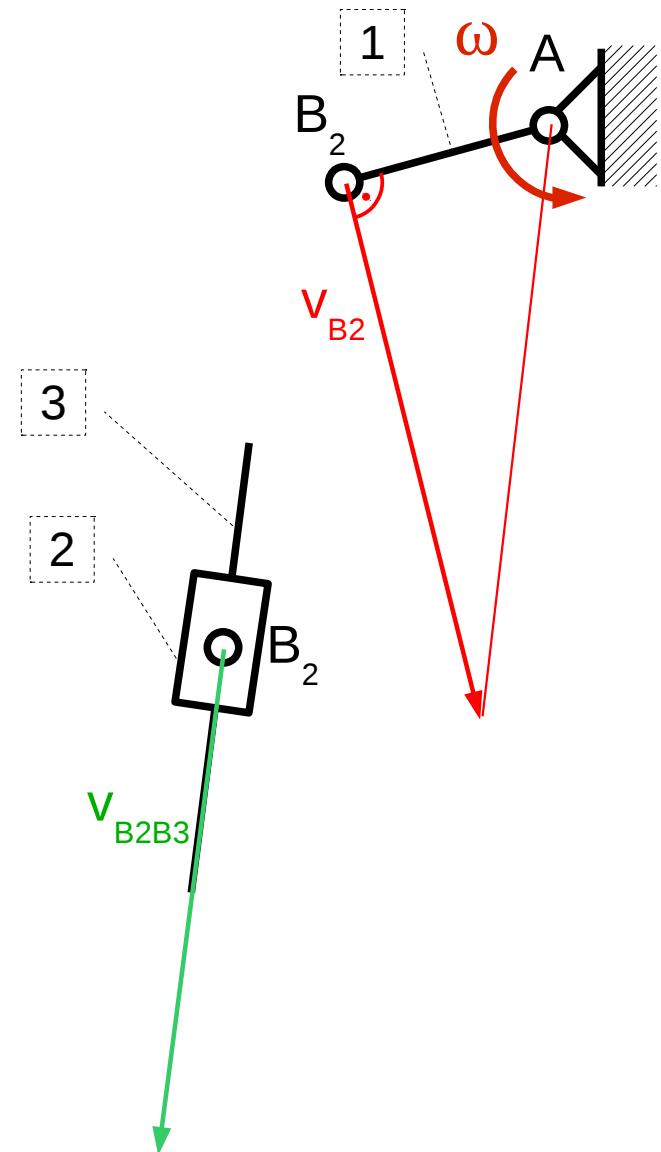

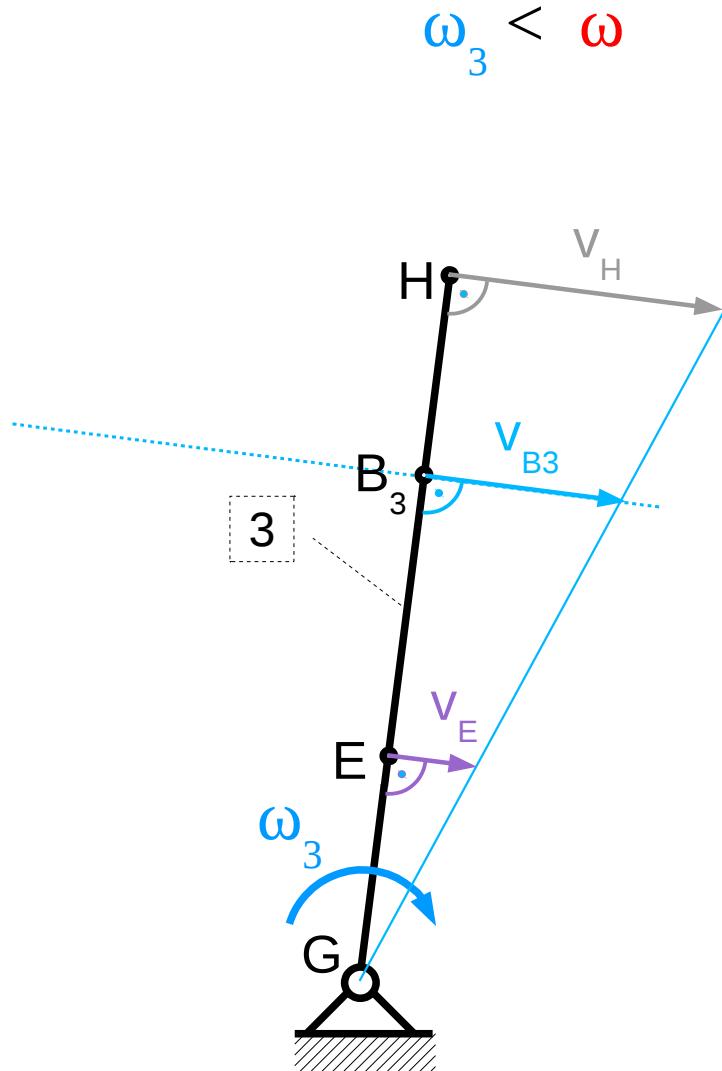

$$\underline{\underline{V_{B2}}} = \underline{\underline{V_{B3}}} + \underline{\underline{\frac{V_{B2B3}}{\parallel 3}}}$$

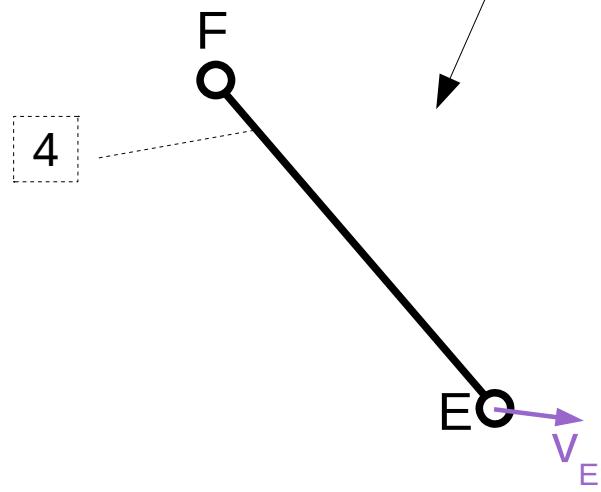

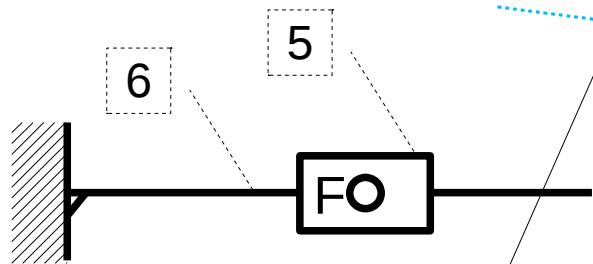

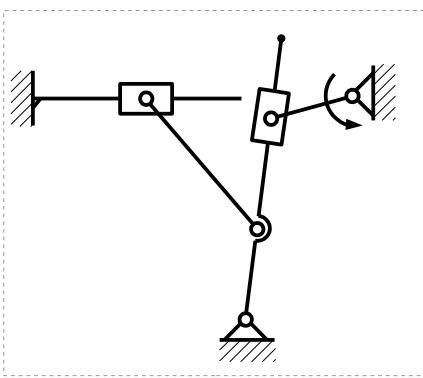

From relation between $|BG|$ and $|BA|$
and relation between V_{B3} i V_{B2} :

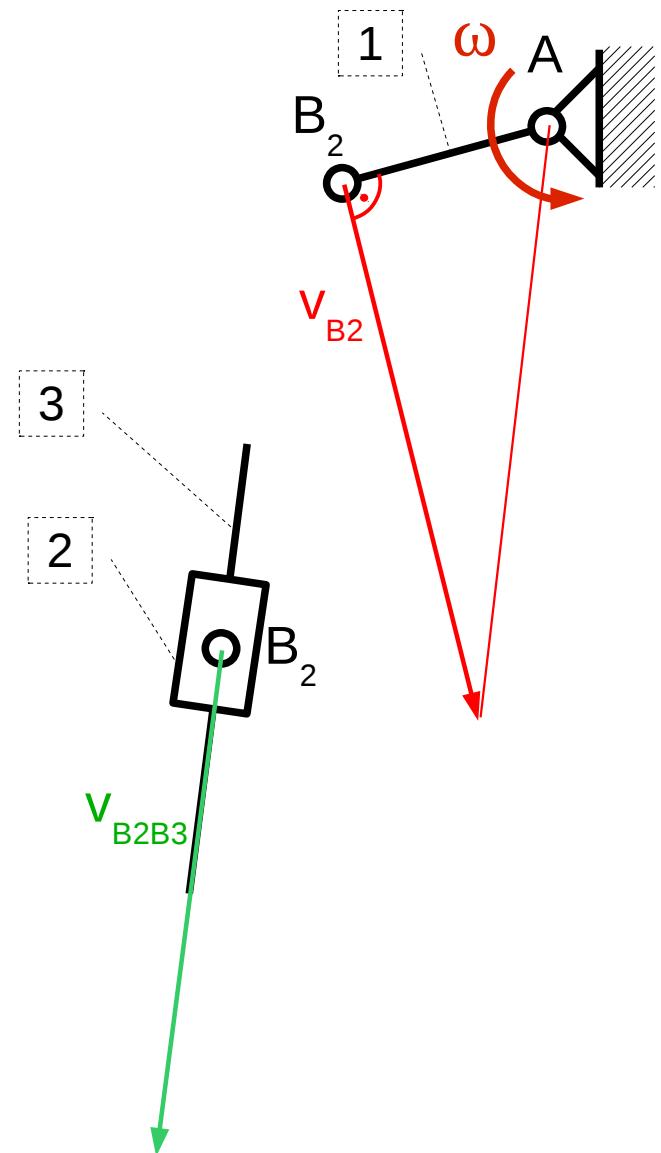

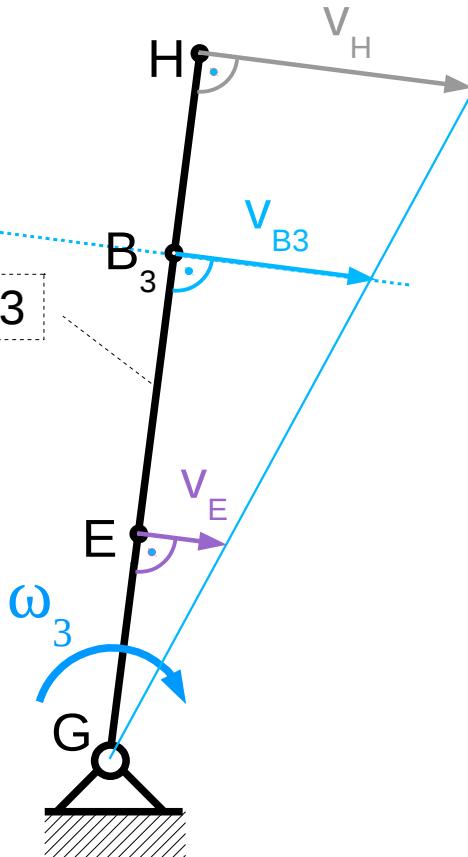

$$\omega_3 < \omega$$

Let's go to the 4th element.
Calculate velocity of the F point using velocity of the E.

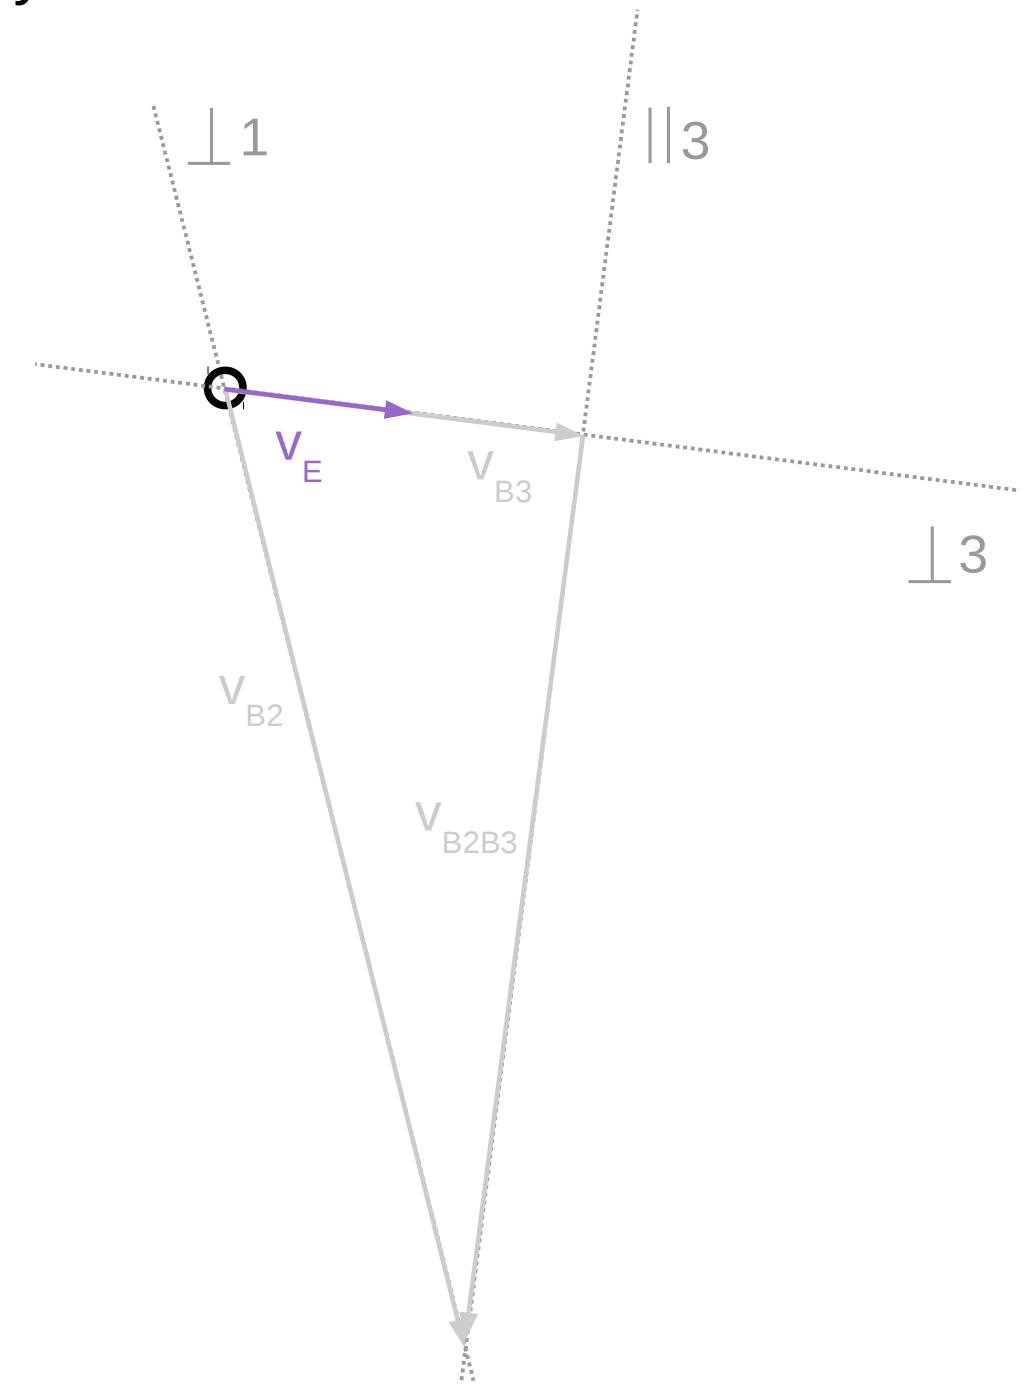

$$\frac{v_F}{\parallel 6} = \underline{\underline{v_E}} + \underline{\underline{v_{FE}}} \quad \perp 3 \quad \perp 4$$

Velocity scheme

$$\underline{\underline{v}}_{B2} = \underline{\underline{v}}_{B3} + \underline{\underline{v}}_{B2B3}$$

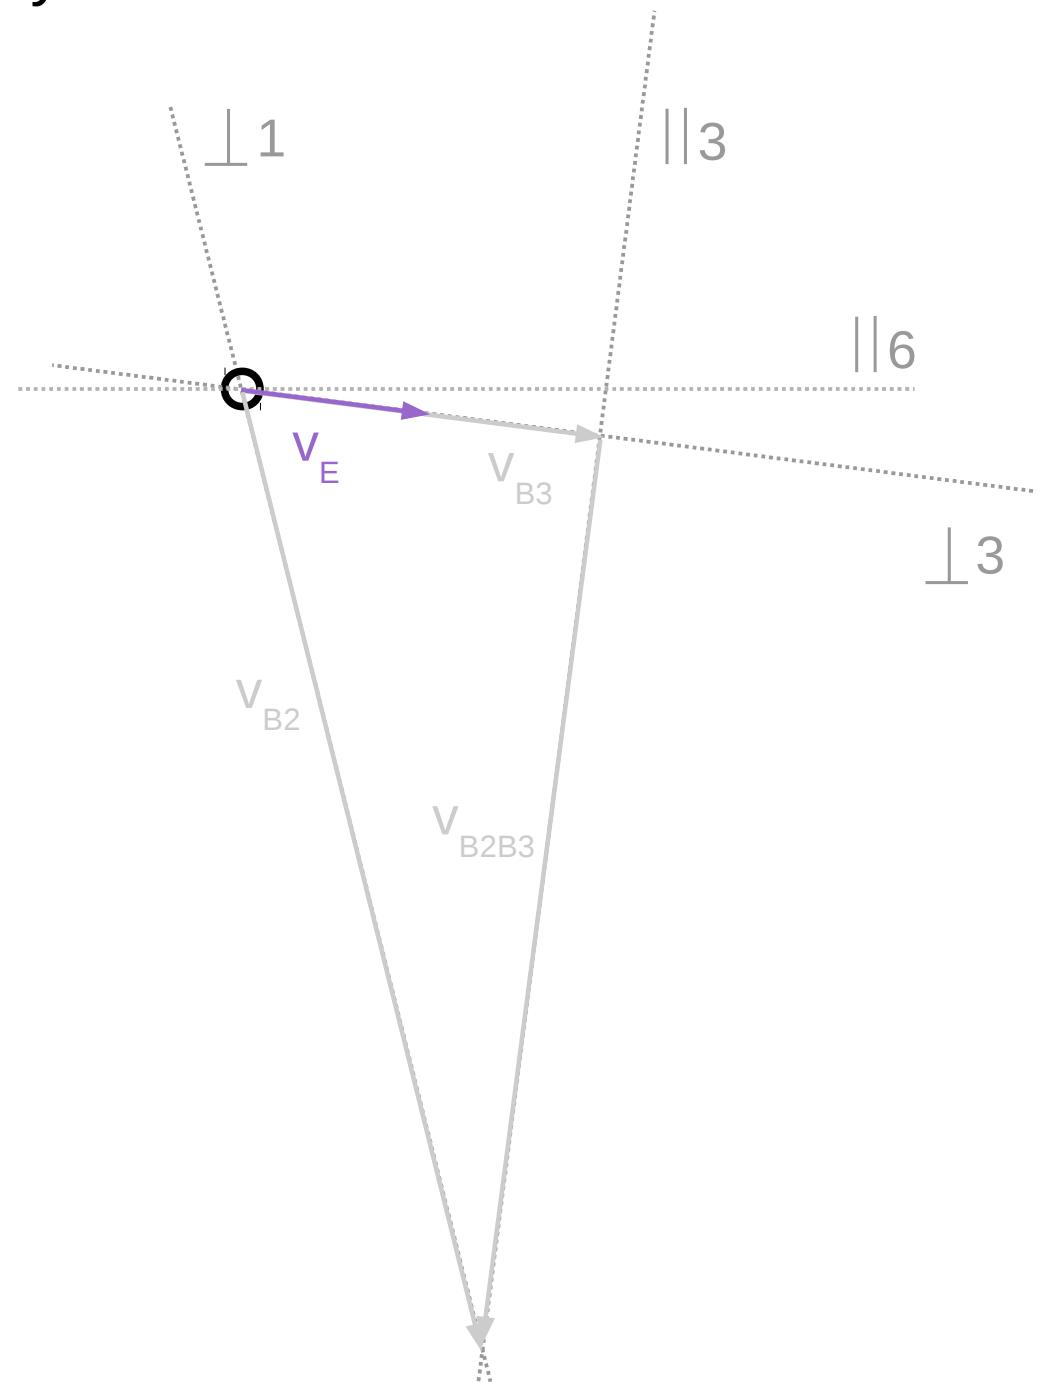

$$\underline{\underline{v}}_F = \underline{\underline{v}}_E + \underline{\underline{v}}_{FE}$$

Velocity scheme

$$\underline{\underline{v}}_{B2} = \underline{\underline{v}}_{B3} + \frac{\underline{\underline{v}}_{B2B3}}{\perp 3}$$

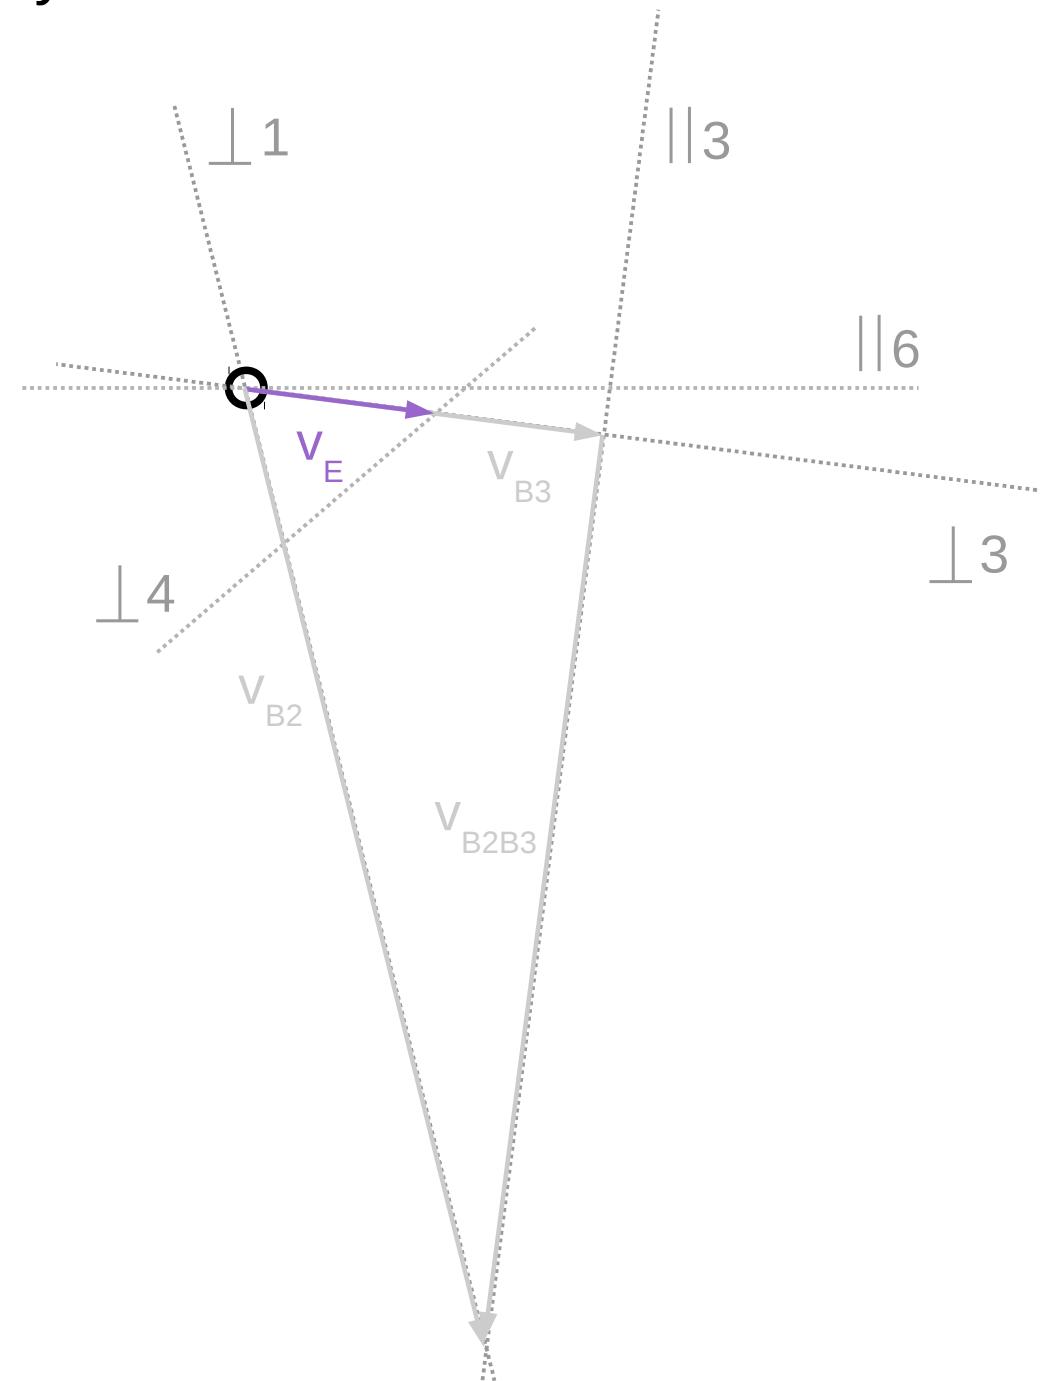

$$\frac{\underline{\underline{v}}_F}{\parallel 6} = \underline{\underline{v}}_E + \frac{\underline{\underline{v}}_{FE}}{\perp 4}$$

Velocity scheme

$$\underline{\underline{v}}_{B2} = \underline{\underline{v}}_{B3} + \underline{\underline{v}}_{B2B3}$$

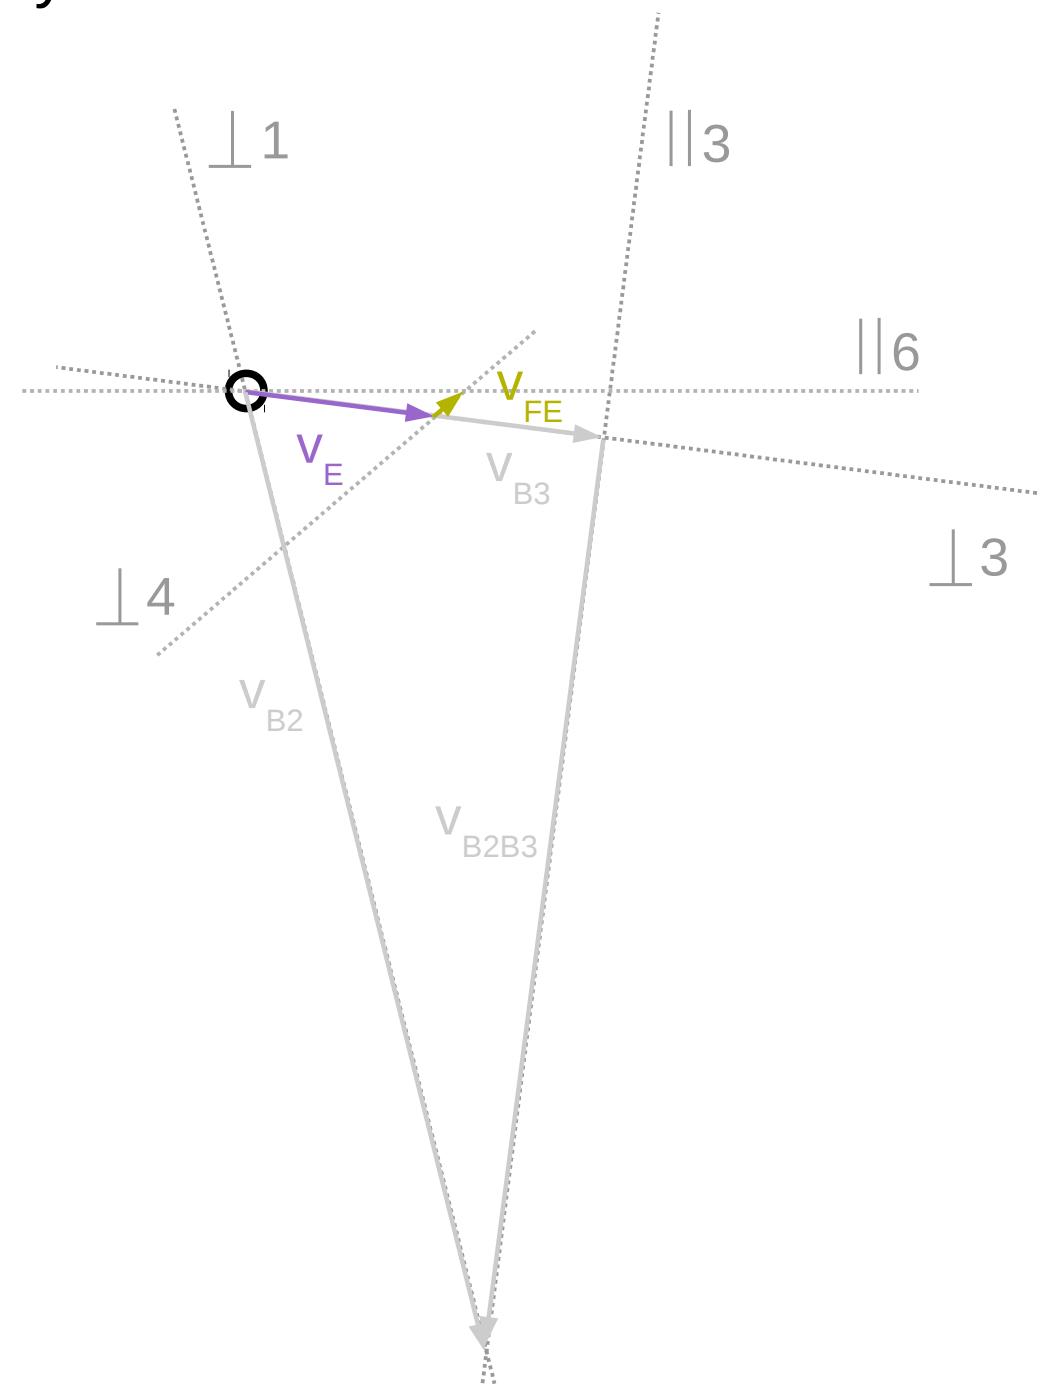

$$\underline{\underline{v}}_F = \underline{\underline{v}}_E + \underline{\underline{v}}_{FE}$$

Velocity scheme

$$\underline{\underline{v}}_{B2} = \underline{\underline{v}}_{B3} + \underline{\underline{v}}_{B2B3}$$

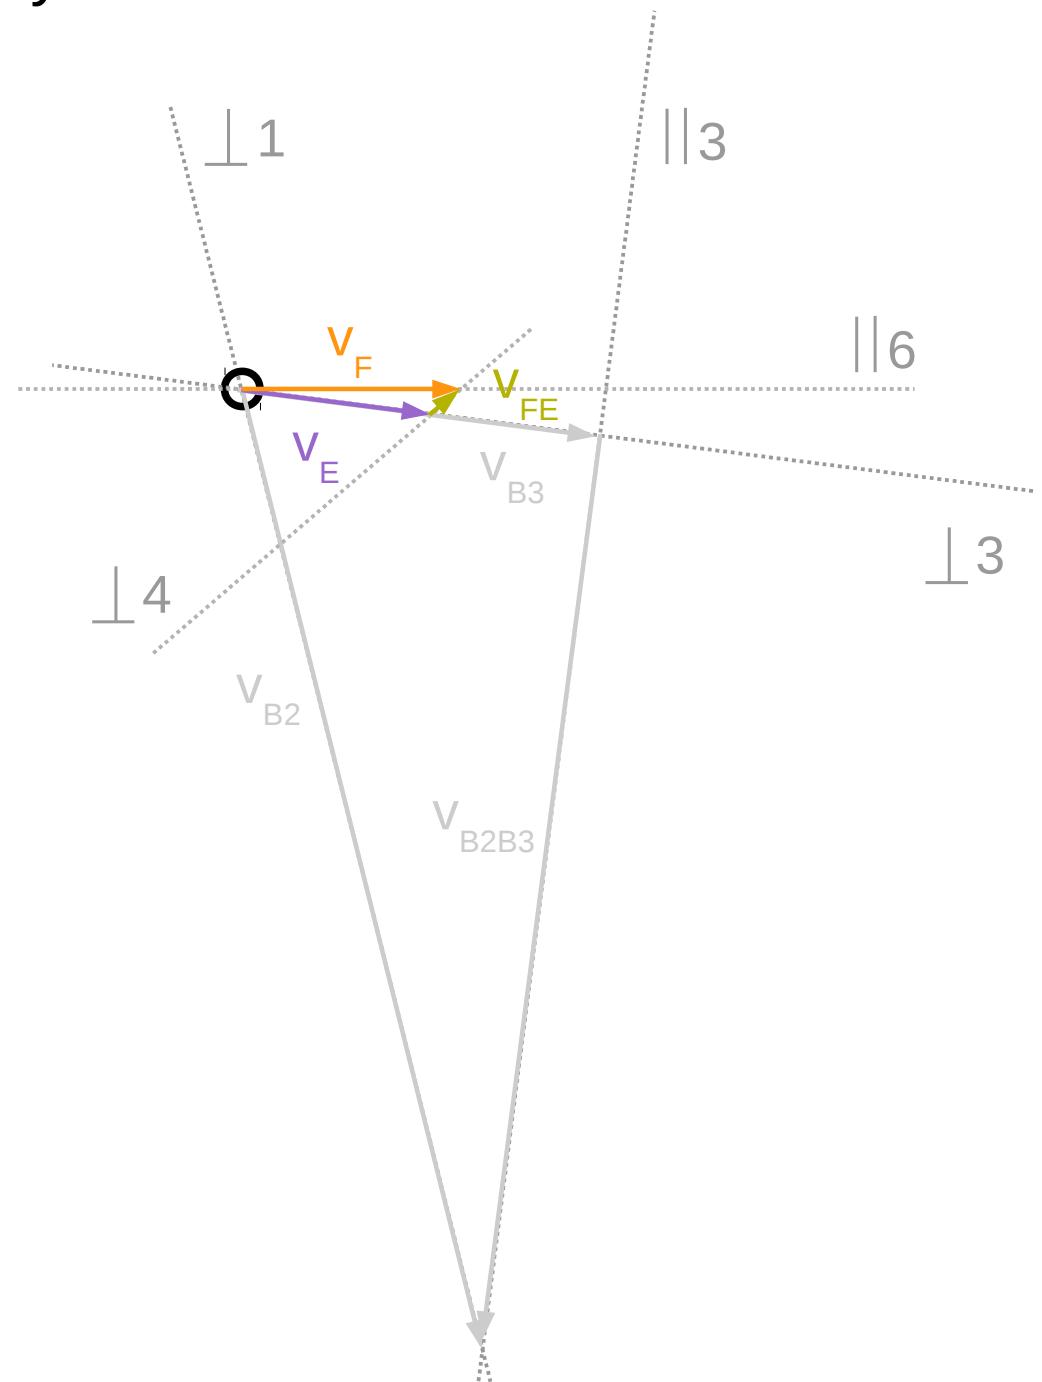

$$\underline{\underline{v}}_F = \underline{\underline{v}}_E + \underline{\underline{v}}_{FE}$$

Velocity scheme

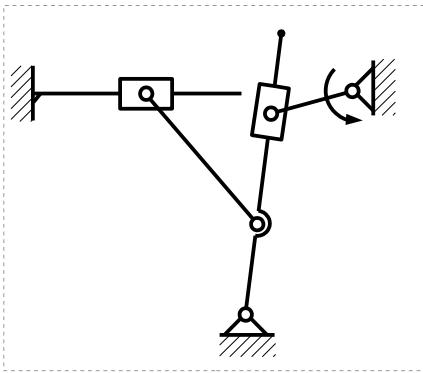

$$\underline{\underline{v}}_{B2} = \underline{\underline{v}}_{B3} + \underline{\underline{v}}_{B2B3}$$

$$\underline{\underline{v}}_{F} = \underline{\underline{v}}_E + \underline{\underline{v}}_{FE}$$

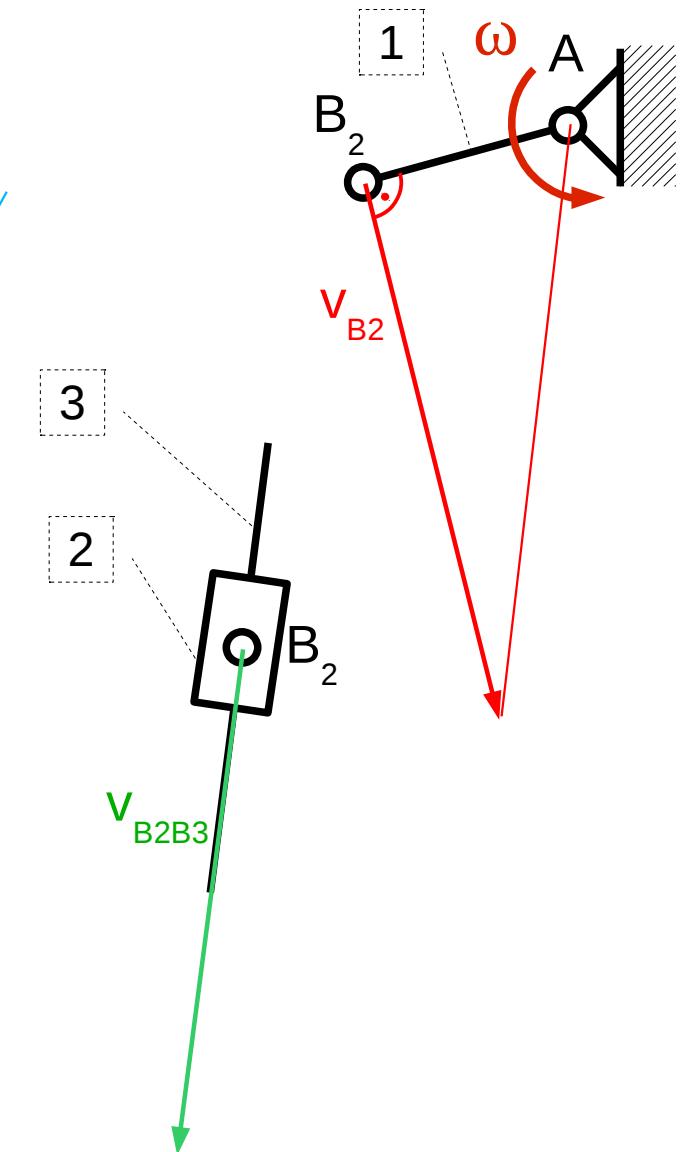

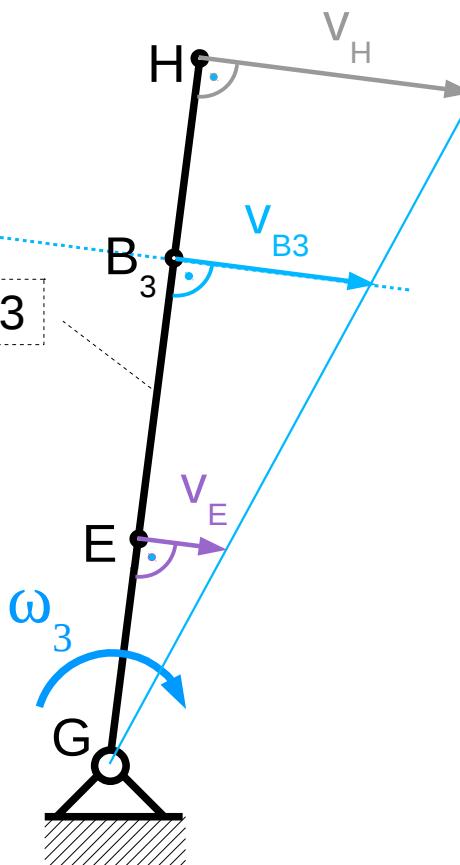

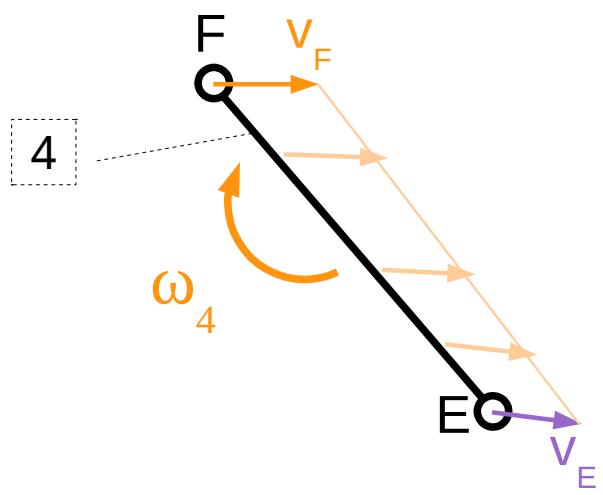

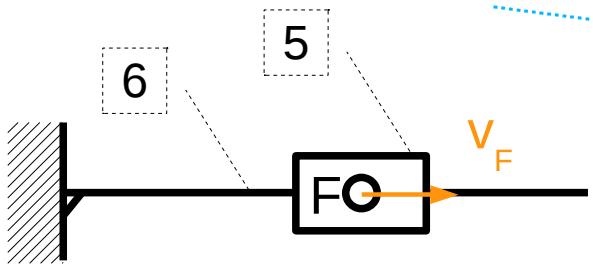

Let us find angular velocity of the 4th element.
It's direction is determined by direction of V_{FE} .

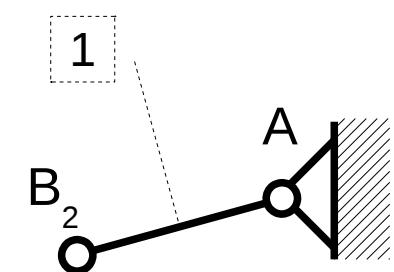

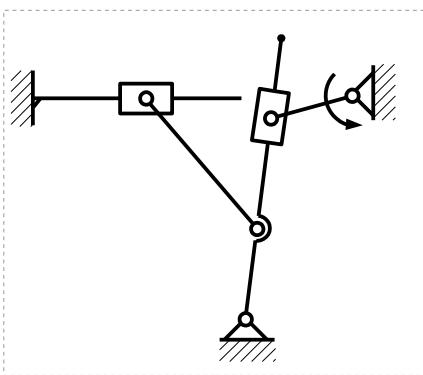

It's value is: $\omega_4 = \frac{V_{FE}}{|FE|}$

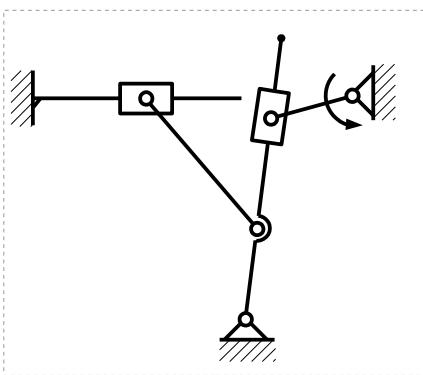

$$\omega > \omega_3 > \omega_4$$

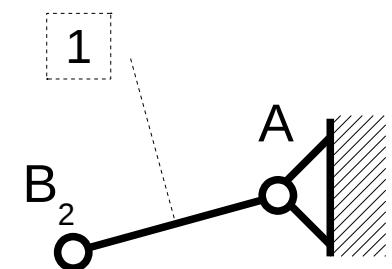

Now we can start acceleration analysis from the 1st element.

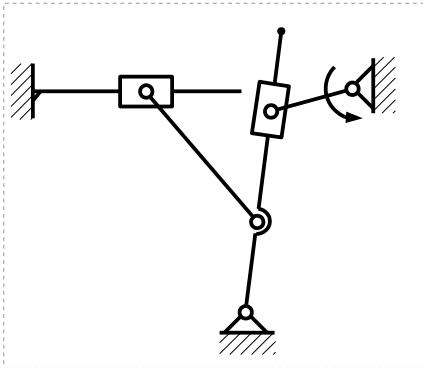

Acceleration analysis for the 1st element.

$$p_{B2} = p_A + p_{B2A}^n + p_{B2A}^t$$

Acceleration analysis for the 1st element.

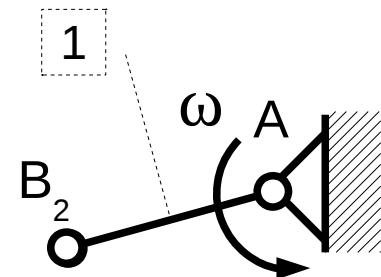

$$p_{B2} = \underline{p_A} + \underline{p_{B2A}^n} + \underline{p_{B2A}^t}$$

$$= 0 \quad ||1$$

$$|p_{B2A}^n| = \omega^2 |B_2 A| \quad |p_{B2A}^t| = \varepsilon |B_2 A| = 0$$

$$\varepsilon = \frac{d\omega}{dt} = 0$$

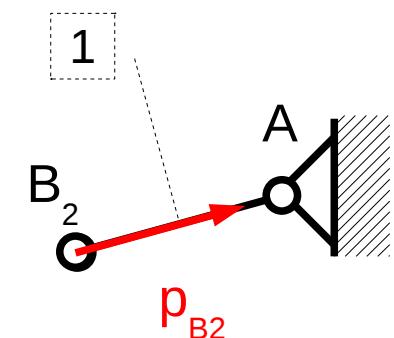

ω assumed constant

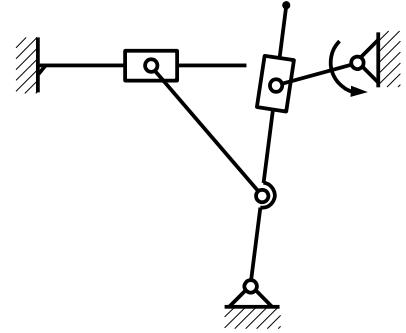

Acceleration analysis for the 1st element.

$$p_{B2} = \frac{p_{B2A}^n}{||1||}$$

$$|p_{B2A}^n| = \omega^2 |B_2 A|$$

Now is time for the 3rd element

$$\underline{\underline{p}}_{B_3} = \underline{\underline{p}}_G + \underline{\underline{p}}_{B_3G}^n + \underline{\underline{p}}_{B_3G}^t$$

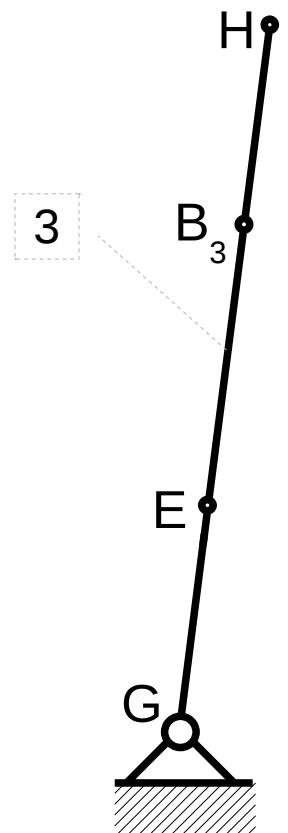

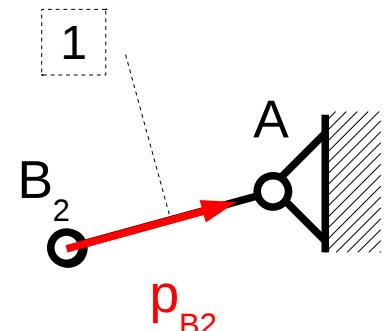

$$= 0 \quad \parallel 3 \quad \perp 3$$

$$|\underline{\underline{p}}_{B_3G}^n| = \omega_3^2 |\underline{\underline{B}}_3 G|$$

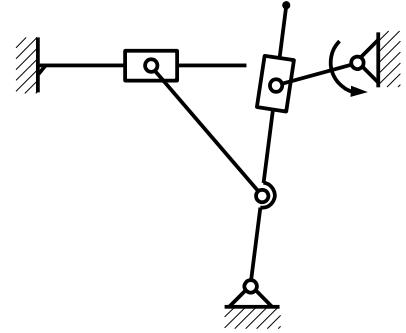

from velocity scheme

$$p_{B_2} = \frac{p_{B_2A}^n}{\parallel 1}$$

$$|p_{B_2A}^n| = \omega^2 |B_2 A|$$

Now is time for the 3rd element

$$\underline{p}_{B_3} = \underline{p}_G + \underline{p}_{B_3G}^n + \underline{p}_{B_3G}^t$$

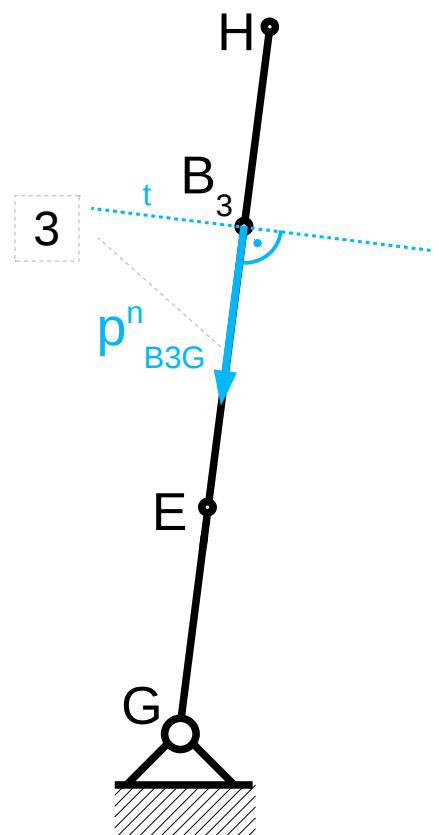

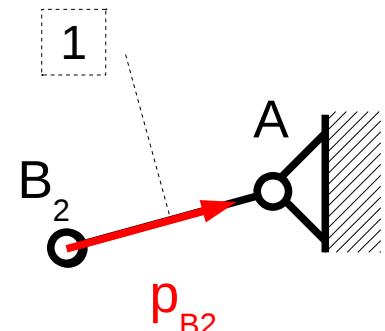

$$= 0 \quad \parallel 3 \quad \perp 3$$

$$|\underline{p}_{B_3G}^n| = \omega_3^2 |\underline{B}_3 G|$$

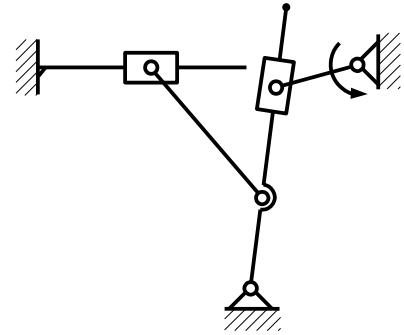

from velocity scheme

$$p_{B_2} = \frac{p_{B_2A}^n}{\parallel 1}$$

$$|p_{B_2A}^n| = \omega^2 |B_2 A|$$

Now is time for the 3rd element

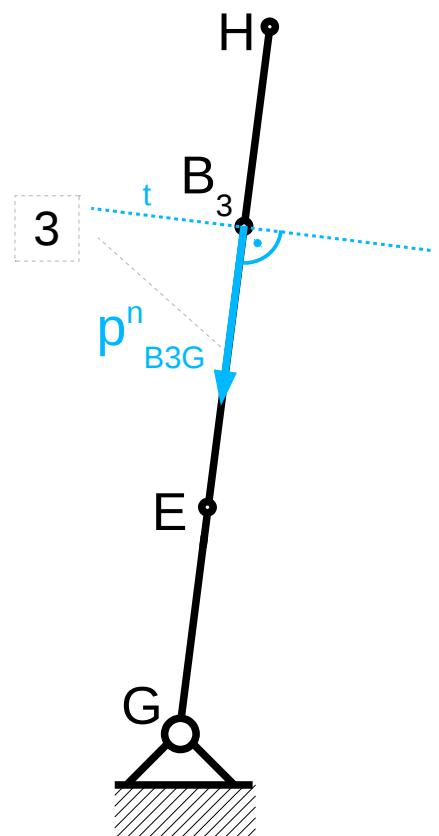

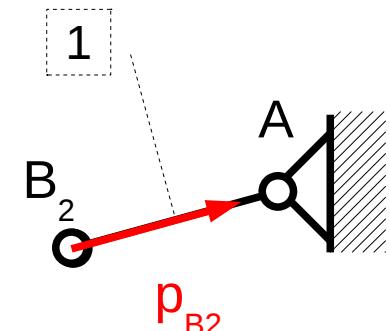

$$p_{B_3} = \frac{p_{B3G}^n}{\parallel 3} + \frac{p_{B3G}^t}{\perp 3}$$

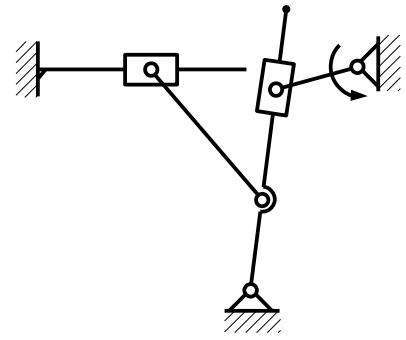

$$|p_{B3G}^n| = \omega_3^2 |B_3 G|$$

$$p_{B_2} = \frac{p_{B2A}^n}{\parallel 1}$$

$$|p_{B2A}^n| = \omega^2 |B_2 A|$$

Let us think about relative motion of 2 and 3.

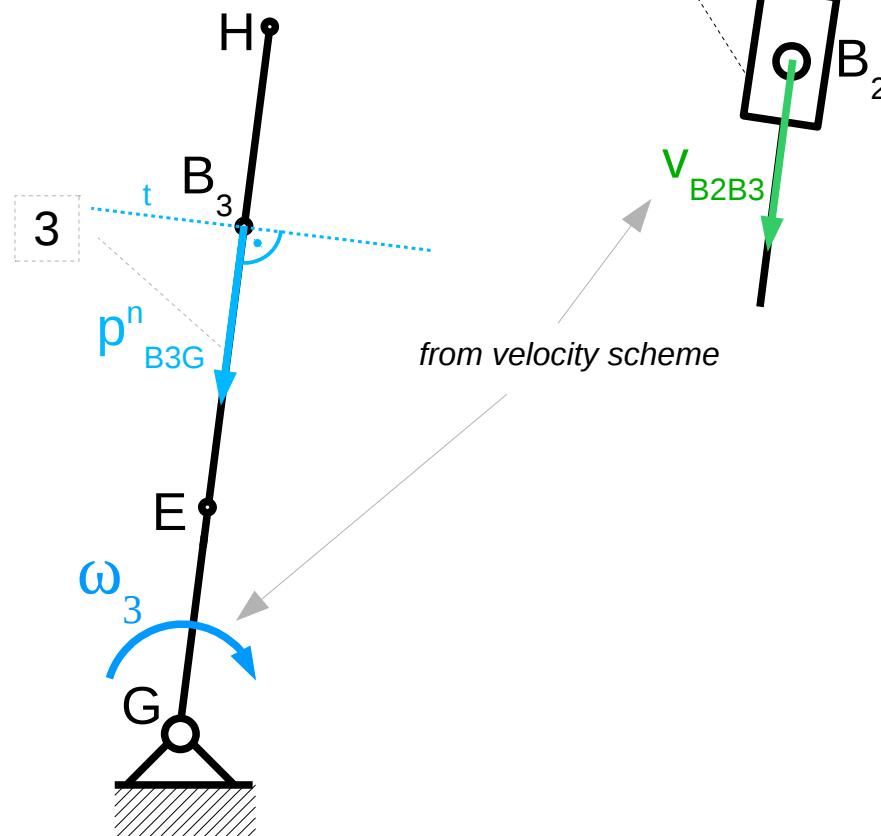

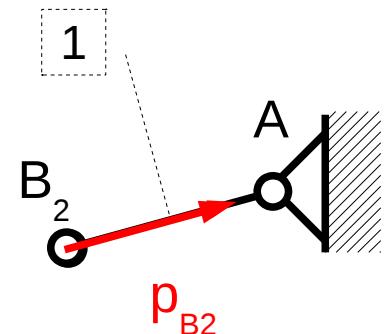

$$p_{B_3} = \frac{p_{B_3G}^n}{\parallel 3} + \frac{p_{B_3G}^t}{\perp 3}$$

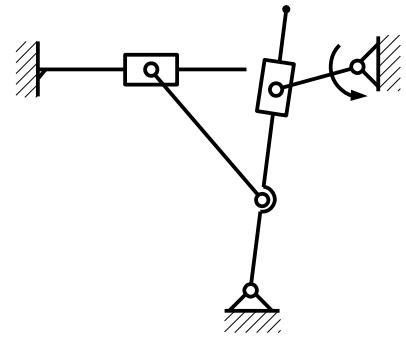

$$|p_{B_3G}^n| = \omega_3^2 |B_3G|$$

$$p_{B_2} = \frac{p_{B_2A}^n}{\parallel 1}$$

$$|p_{B_2A}^n| = \omega^2 |B_2A|$$

Let us think about relative motion of 2 and 3.

$$p_{B_3} = \underline{\underline{p_{B_3G}}} + \underline{p_{t_{B_3G}}}$$

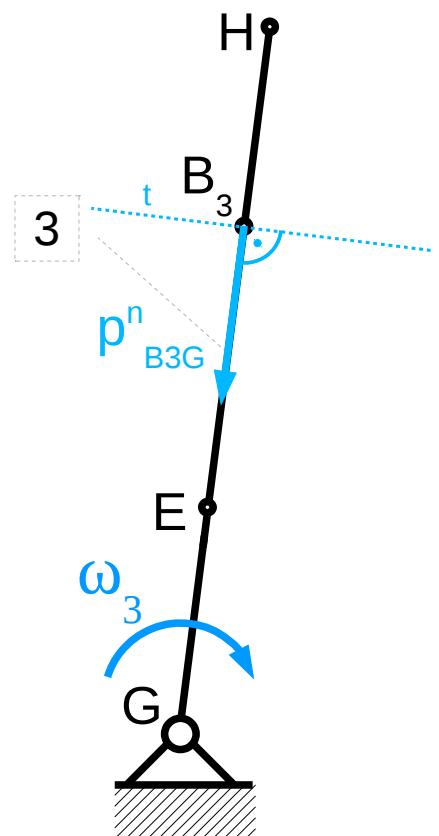

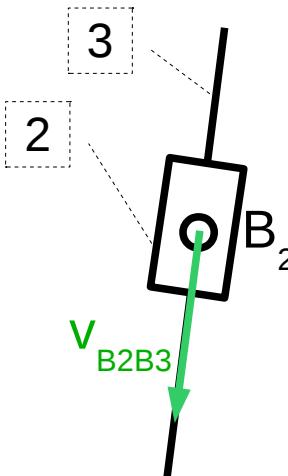

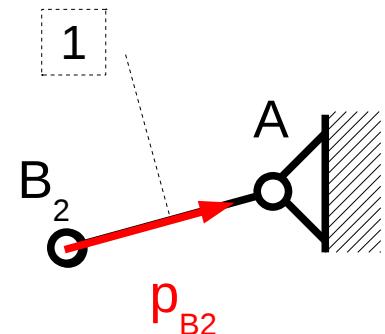

$\parallel 3$ $\perp 3$

$$|p_{B_3G}^n| = \omega_3^2 |B_3 G|$$

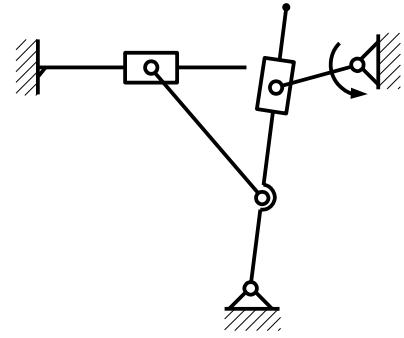

REFERENCE FRAME: rod 3
RELATIVE MOTION: slider 2 movement along rod 3

$$p_{B_2} = \underline{\underline{p_{B_2A}}} \\ \parallel 1$$

$$|p_{B_2A}^n| = \omega^2 |B_2 A|$$

Let us think about relative motion of 2 and 3.

$$p_{B_3} = \underline{\underline{p_{B_3G}}} + \underline{p_{B_3G}^t}$$

||3 ⊥3

$$|p_{B_3G}^n| = \omega_3^2 |B_3 G|$$

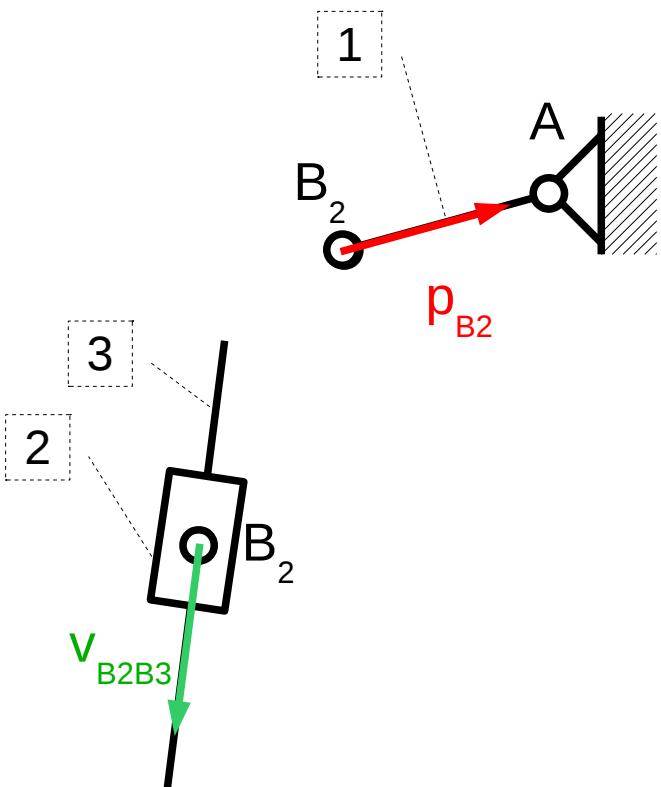

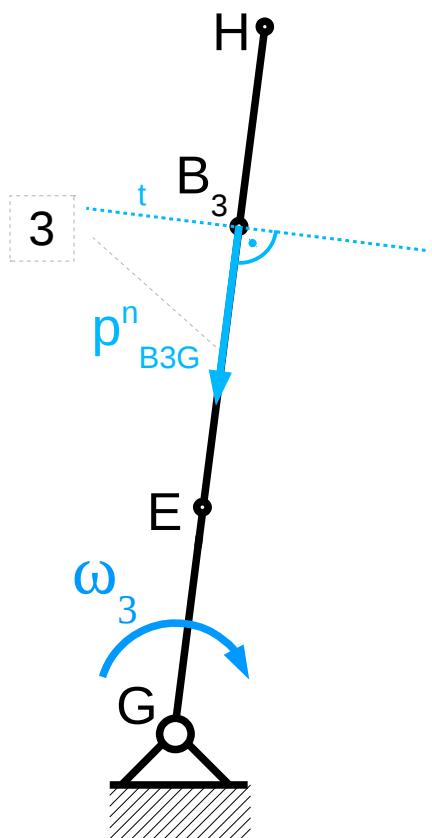

REFERENCE FRAME: rod 3
RELATIVE MOTION: slider 2 movement along rod 3

EQUATION FOR RELATIVE MOTION:

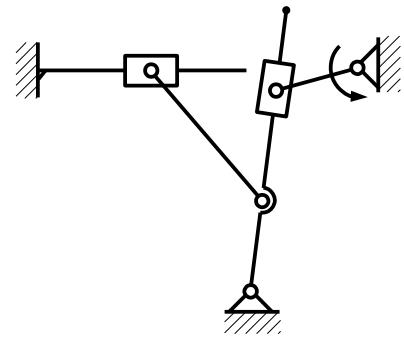

$$p_{B_2} = p_{B_3}^u + p_{B_3}^w + p_{B_3}^c$$

$$p_{B_2} = \underline{\underline{p_{B_2A}}} \\ ||1$$

$$|p_{B_2A}^n| = \omega^2 |B_2 A|$$

Let us think about relative motion of 2 and 3.

$$p_{B_3} = \underline{\underline{p_{B_3G}}} + \underline{p_{B_3G}^t}$$

||3 ⊥3

$$|p_{B_3G}^n| = \omega_3^2 |B_3G|$$

REFERENCE FRAME: rod 3

RELATIVE MOTION: slider 2 movement along rod 3

EQUATION FOR RELATIVE MOTION:

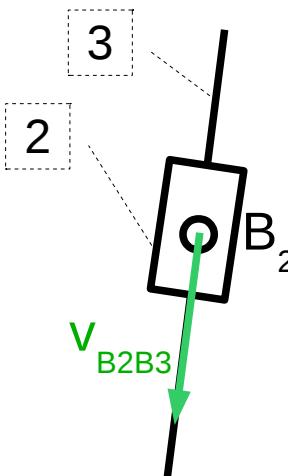

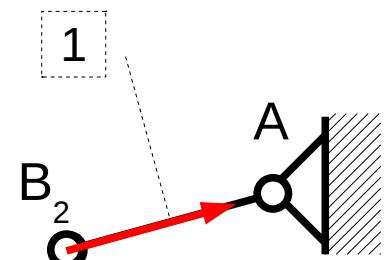

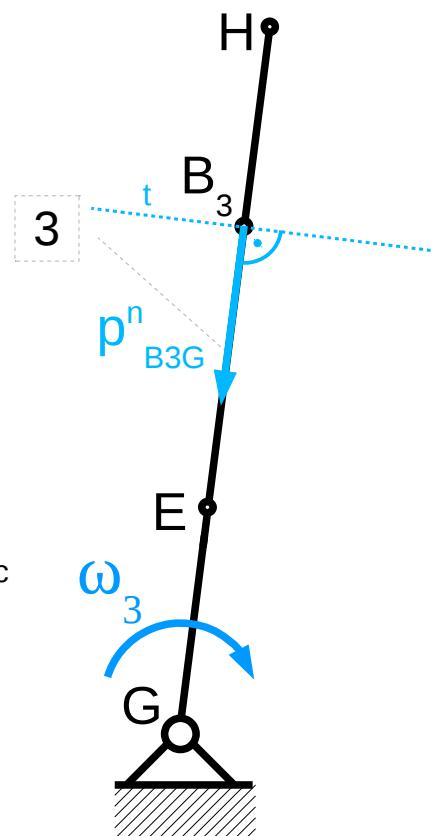

$$p_{B_2} = p_{B_3}^u + p^w + p^c$$

$$p_{B_2A}^n = p_{B_3G}^n + p_{B_3G}^t + p_{B_2B_3}^w + p^c$$

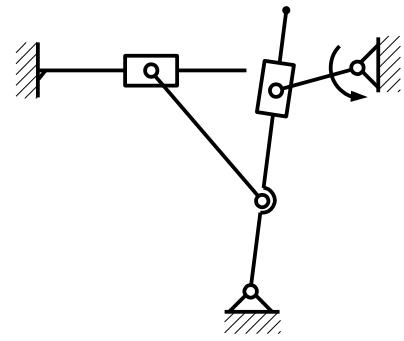

$$p_{B_2} = \underline{\underline{p_{B_2A}^n}}$$

||1

$$|p_{B_2A}^n| = \omega^2 |B_2A|$$

Let us think about relative motion of 2 and 3.

$$p_{B_3} = \underline{\underline{p_{B_3G}}} + \underline{p_{B_3G}^t} \quad \parallel 3 \quad \perp 3$$

$$|p_{B_3G}^n| = \omega_3^2 |B_3 G|$$

REFERENCE FRAME: rod 3

RELATIVE MOTION: slider 2 movement along rod 3

EQUATION FOR RELATIVE MOTION:

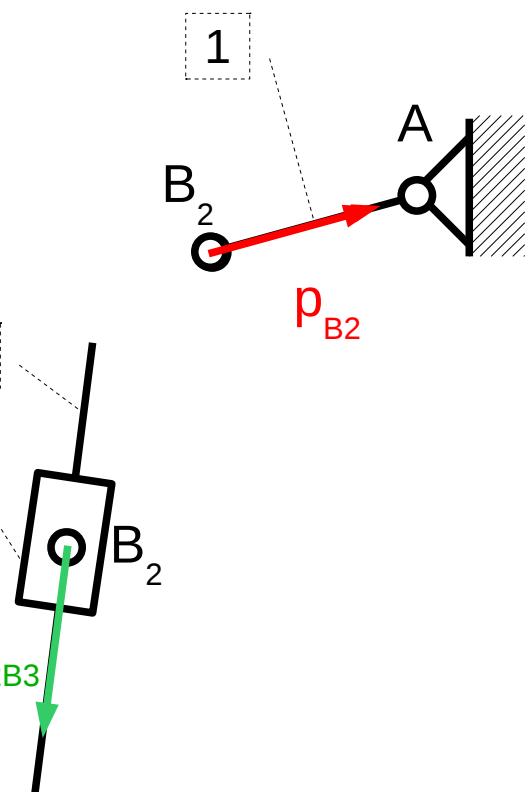

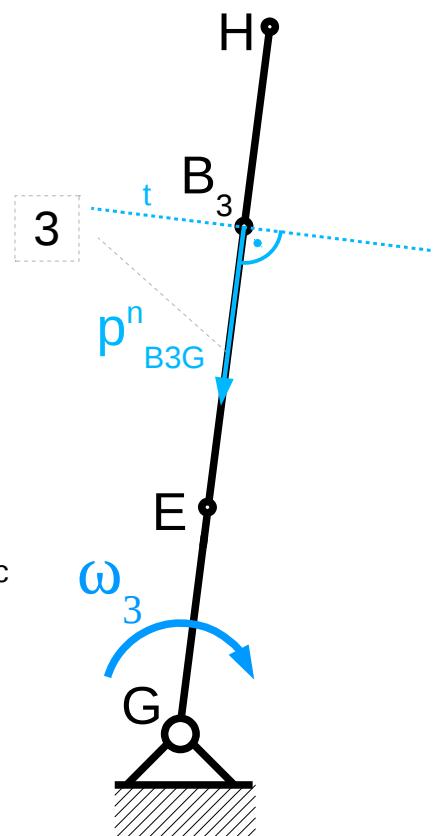

$$p_{B_2} = p_{B_3}^u + p_{B_3}^w + p_{B_3}^c$$

$$\underline{\underline{p_{B_2A}}} = \underline{\underline{p_{B_3G}}} + \underline{p_{B_3G}^t} + \underline{p_{B_2B_3}^w} + \underline{p_{B_2B_3}^c}$$

Acceleration scheme

$$\frac{p^n_{B2A}}{\parallel 1} - \frac{p^c}{\perp 3} - \frac{p^w_{B2B3}}{\parallel 3} = \frac{p^n_{B3G}}{\parallel 3} + \frac{p^t_{B3G}}{\perp 3}$$

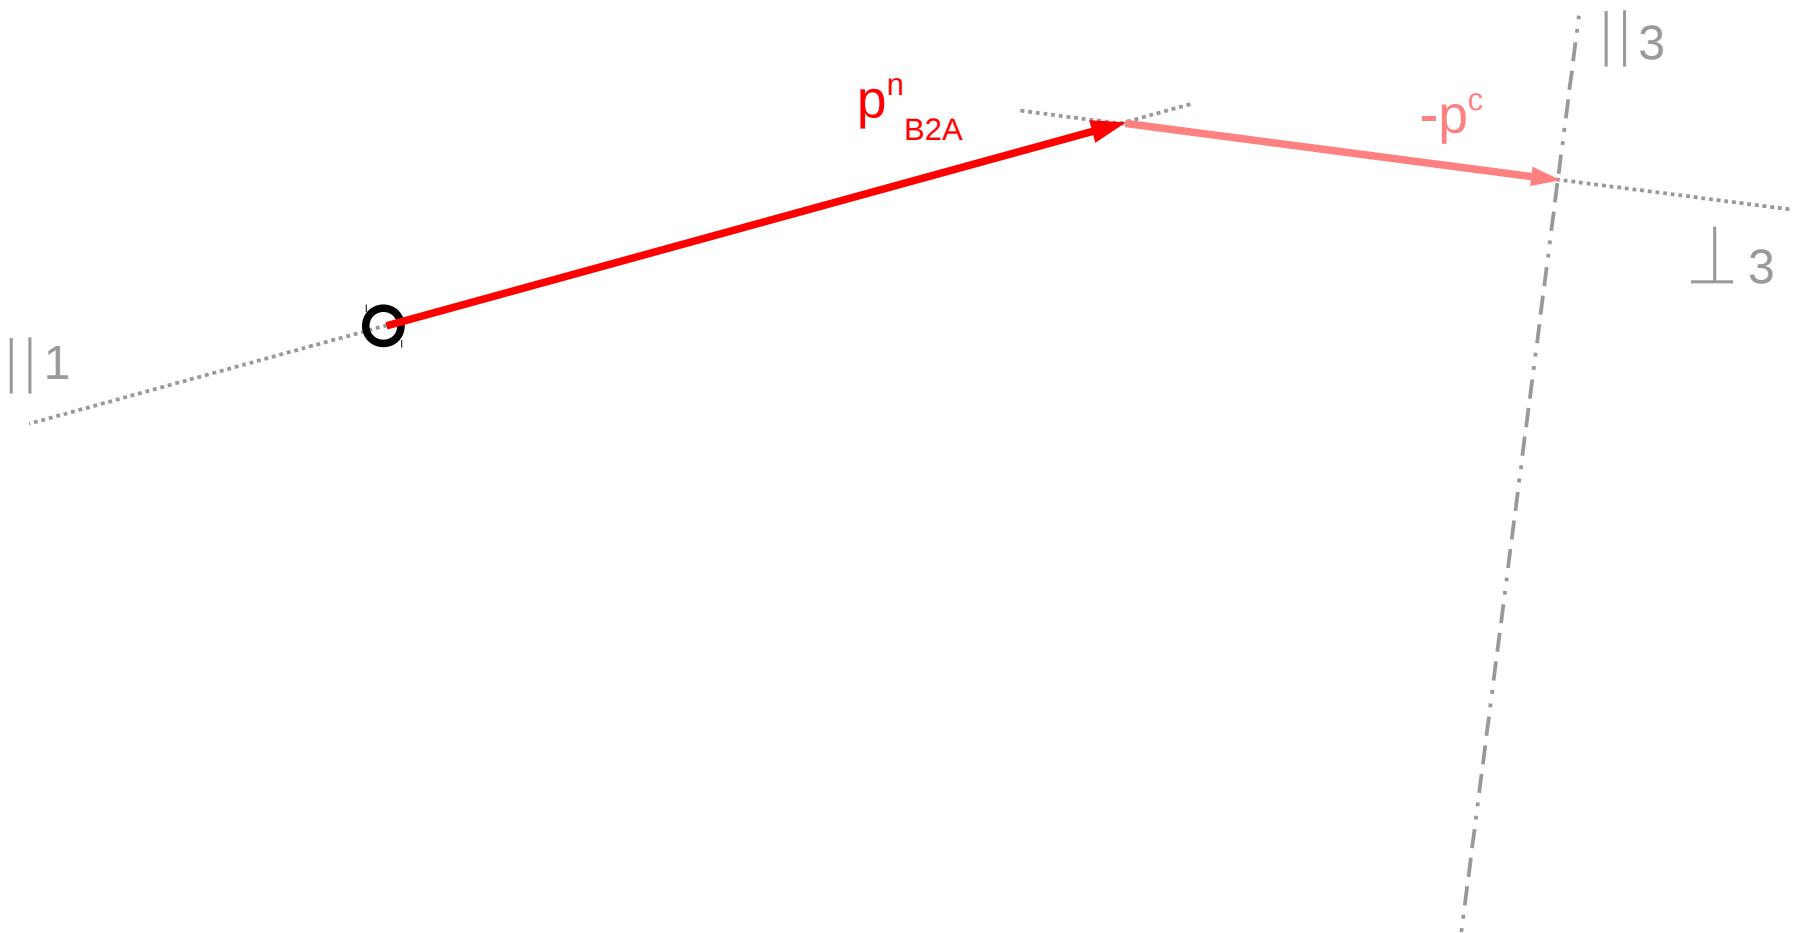

Acceleration scheme

$$\frac{p^n_{B2A}}{\parallel 1} - \frac{p^c}{\perp 3} - \frac{p^w_{B2B3}}{\parallel 3} = \frac{p^n_{B3G}}{\parallel 3} + \frac{p^t_{B3G}}{\perp 3}$$

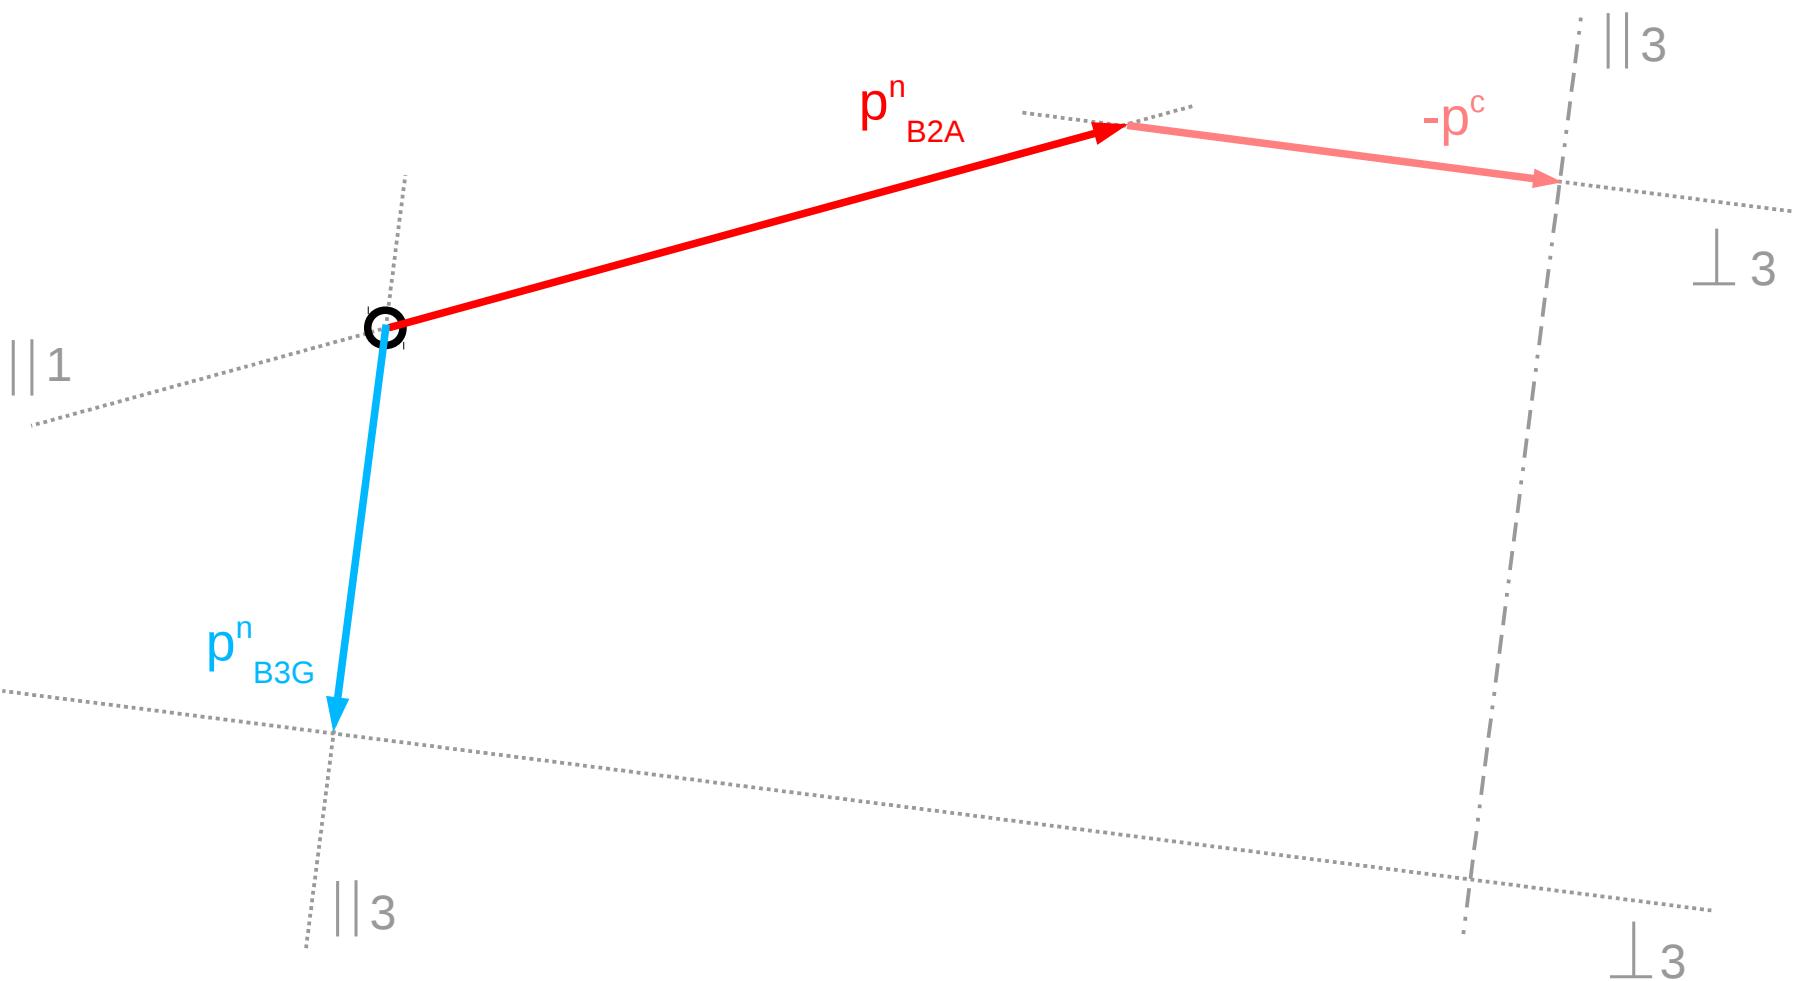

Acceleration scheme

The diagram shows the decomposition of an association scheme. On the left, three components are shown in separate circles: p^n B2A (red), $-p^c$ (pink), and $-p^w$ B2B3 (blue). An equals sign follows. On the right, the total is shown as a large green circle containing two overlapping circles: p^n B3G (cyan) and $+p^t$ B3G (green). The green circle has a brown border.

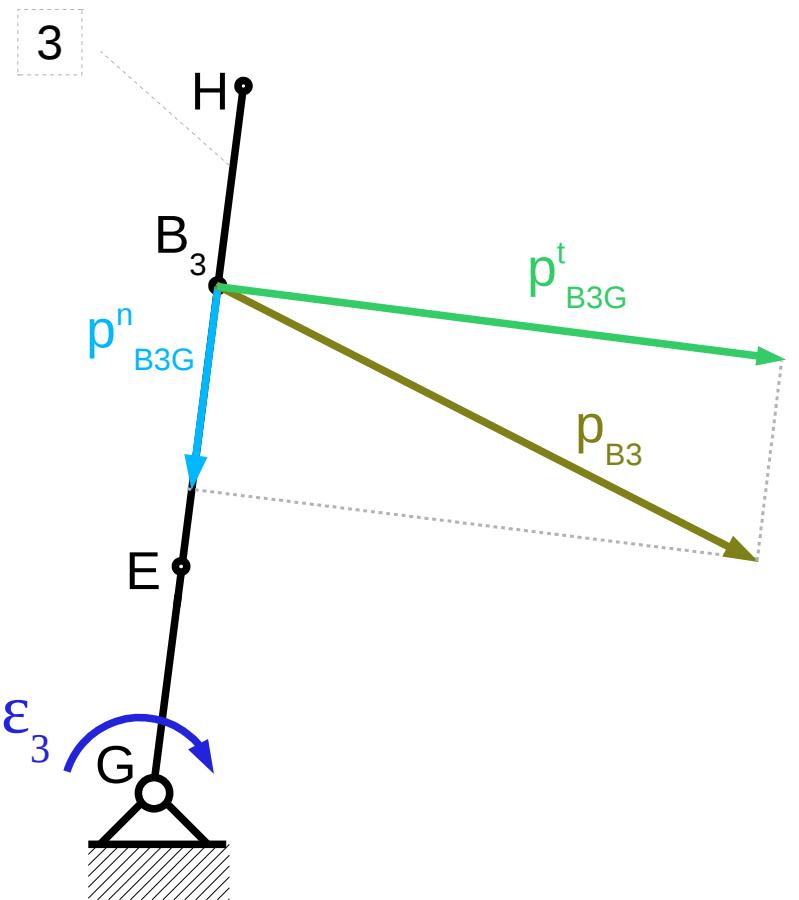

3rd element's accelerations

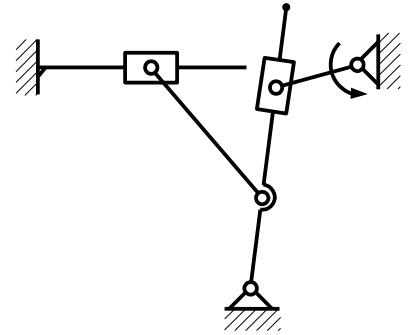

3rd element's accelerations

$$\varepsilon_3 = \frac{|p_{B3G}^t|}{|B_3 G|}$$

Acceleration of the E point

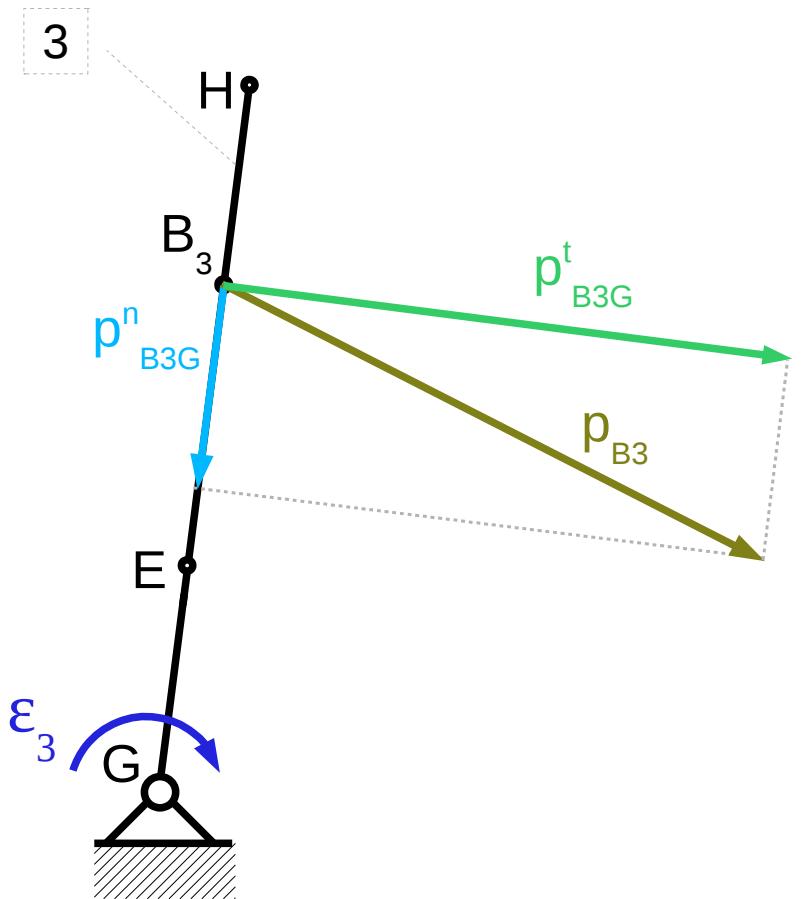

$$p_E = p_G + p_{EG}^n + p_{EG}^t$$

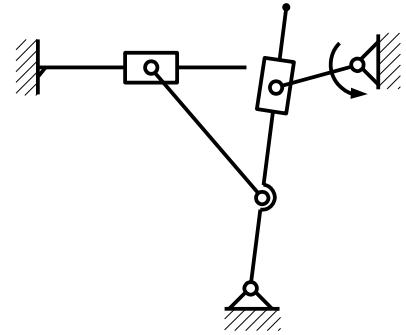

$$|p_{EG}^n| = \omega_3^2 |EG|$$

$$|p_{EG}^t| = \varepsilon_3 |EG|$$

$$\varepsilon_3 = \frac{|p_{B3G}^t|}{|B_3 G|}$$

Acceleration of the E point

$$p_E = p_G + p_{EG}^n + p_{EG}^t$$

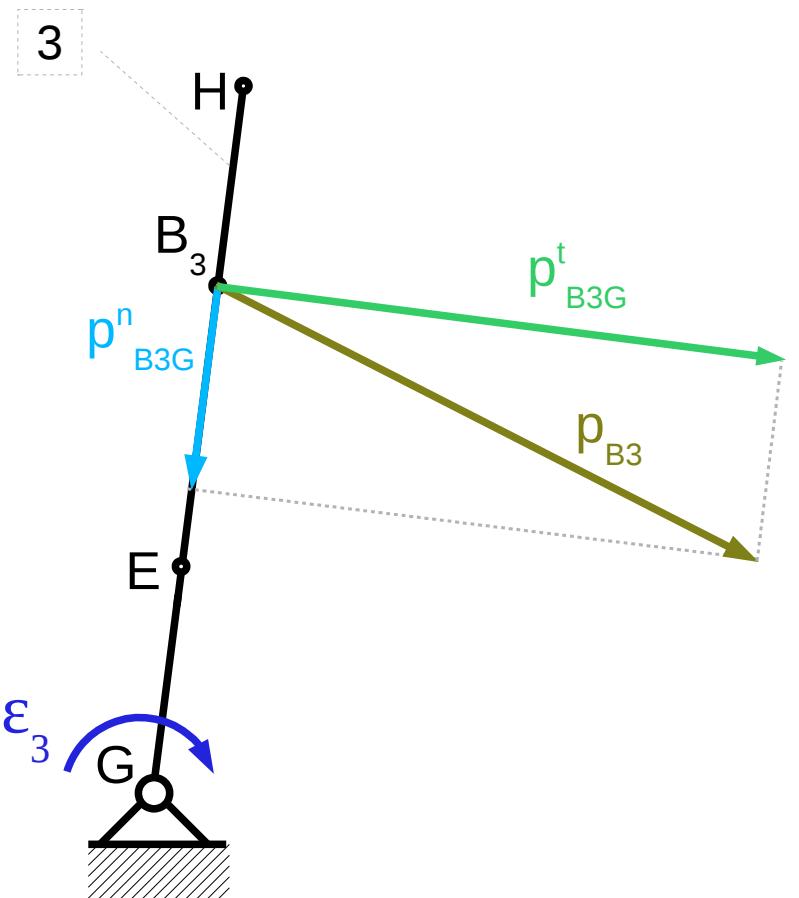

$$|p_{EG}^n| = \omega_3^2 |EG|$$

$$|p_{EG}^t| = \varepsilon_3 |EG|$$

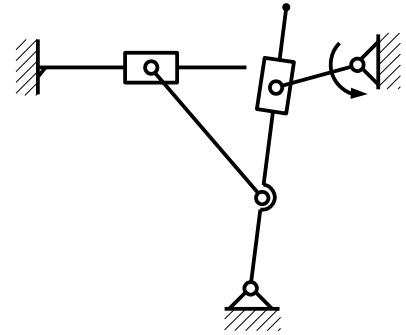

$$|p_{B3G}^n| = \omega_3^2 |B_3 G|$$

$$|p_{B3G}^t| = \varepsilon_3 |B_3 G|$$

$$\varepsilon_3 = \frac{|p_{B3G}^t|}{|B_3 G|}$$

Acceleration of the E point

$$p_E = p_G + p_{EG}^n + p_{EG}^t$$

$$\varepsilon_3 = \frac{|p_{B3G}^t|}{|B_3 G|}$$

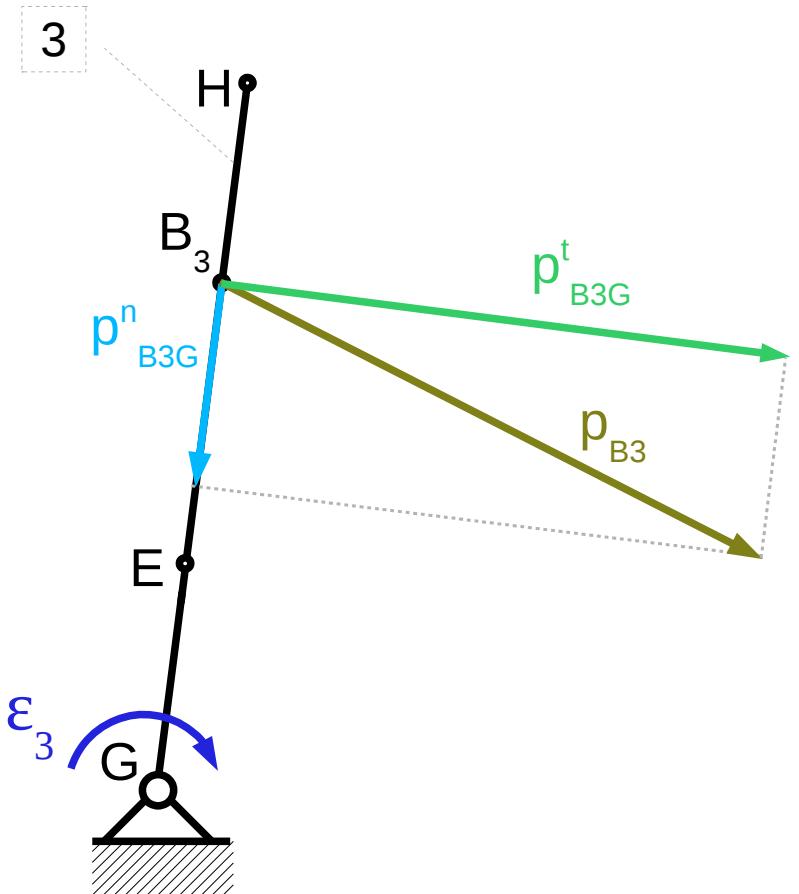

$$|p_{EG}^n| = \omega_3^2 |EG| = |p_{B3G}^n| \frac{|EG|}{|B_3 G|}$$

$$|p_{EG}^t| = \varepsilon_3 |EG| = |p_{B3G}^t| \frac{|EG|}{|B_3 G|}$$

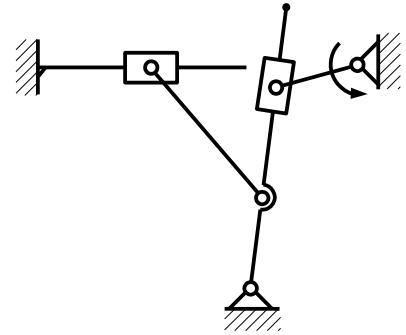

after
substitution

$$|p_{B3G}^n| = \omega_3^2 |B_3 G|$$

$$|p_{B3G}^t| = \varepsilon_3 |B_3 G|$$

Acceleration of the E point

$$p_E = p_G + p_{EG}^n + p_{EG}^t$$

$$\varepsilon_3 = \frac{|p_{B3G}^t|}{|B_3 G|}$$

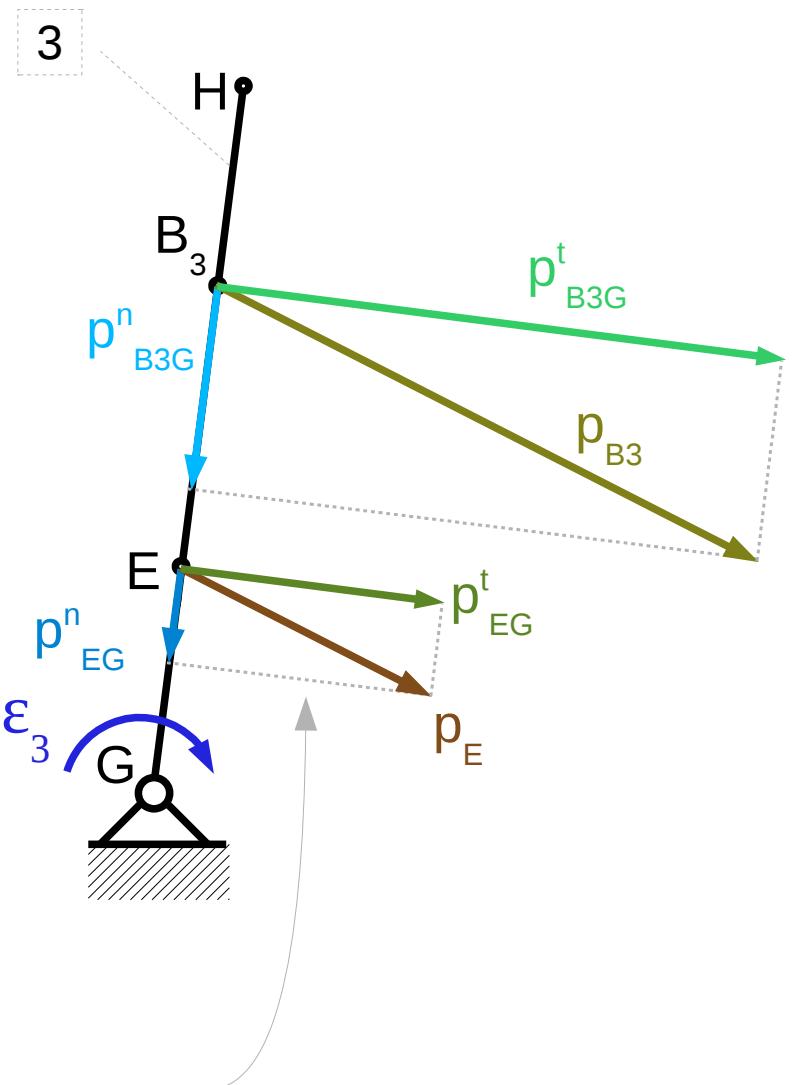

$$|p_{EG}^n| = \omega_3^2 |EG| = |p_{B3G}^n| \frac{|EG|}{|B_3 G|}$$

$$|p_{EG}^t| = \varepsilon_3 |EG| = |p_{B3G}^t| \frac{|EG|}{|B_3 G|}$$

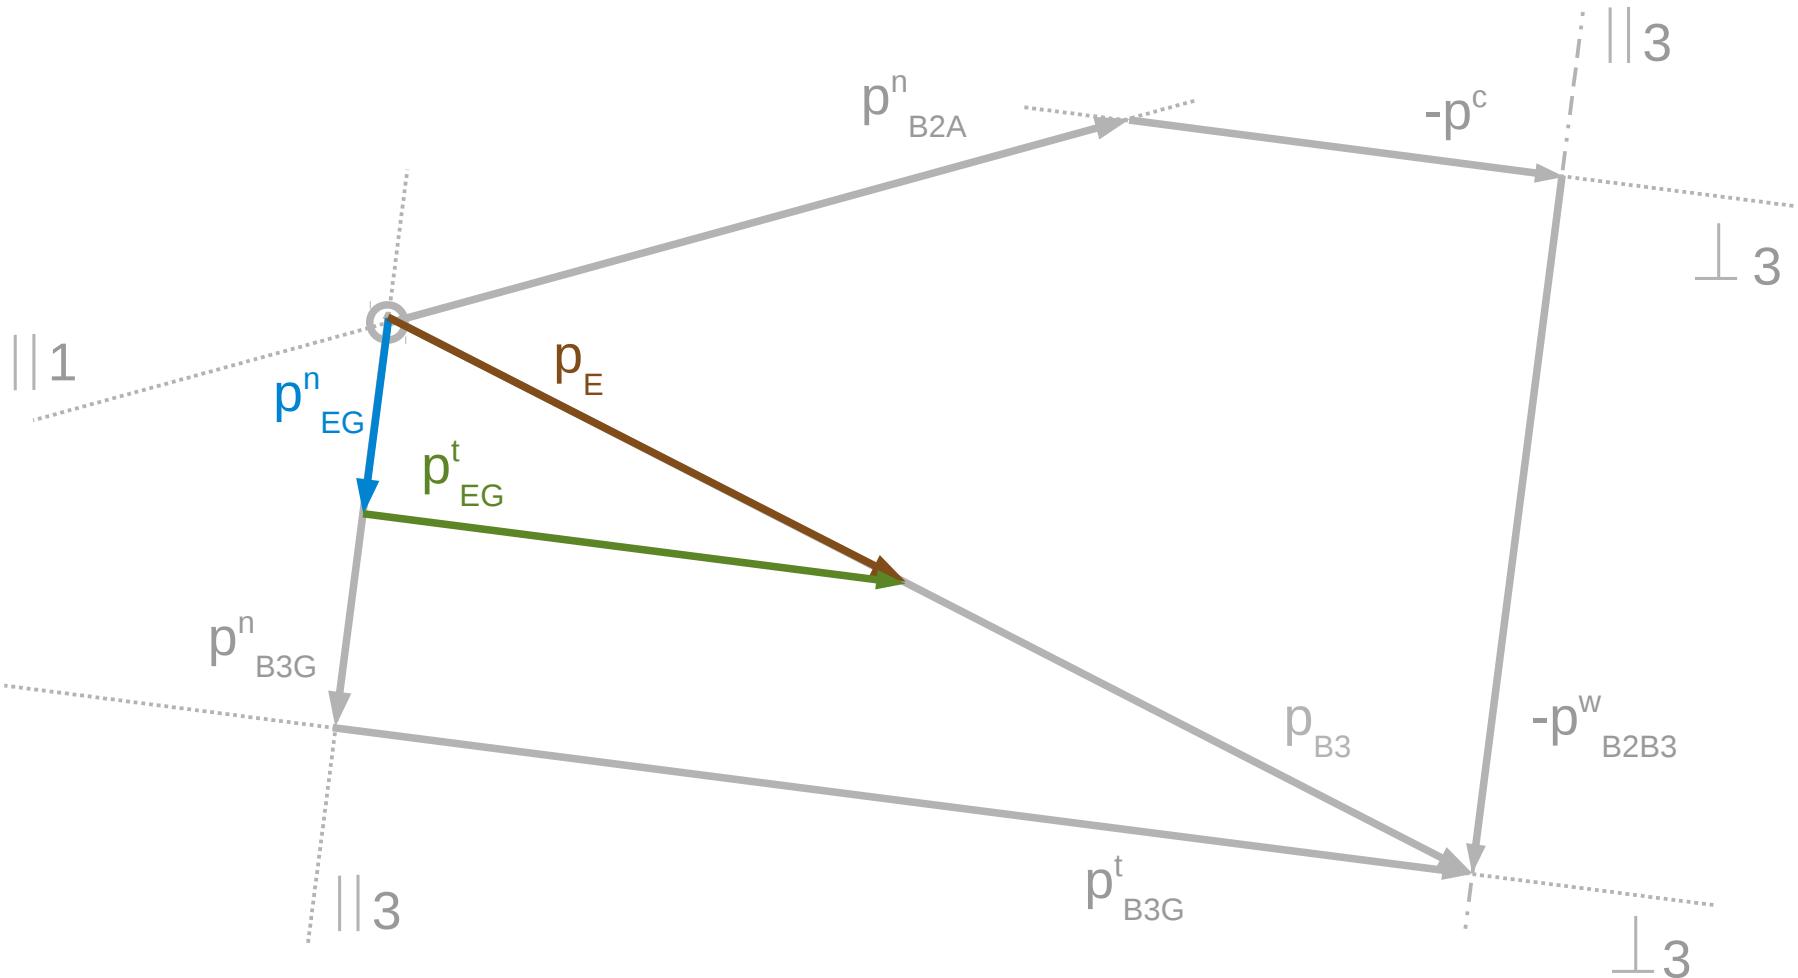

$$|p_{B3G}^n| = \omega_3^2 |B_3 G|$$

$$|p_{B3G}^t| = \varepsilon_3 |B_3 G|$$

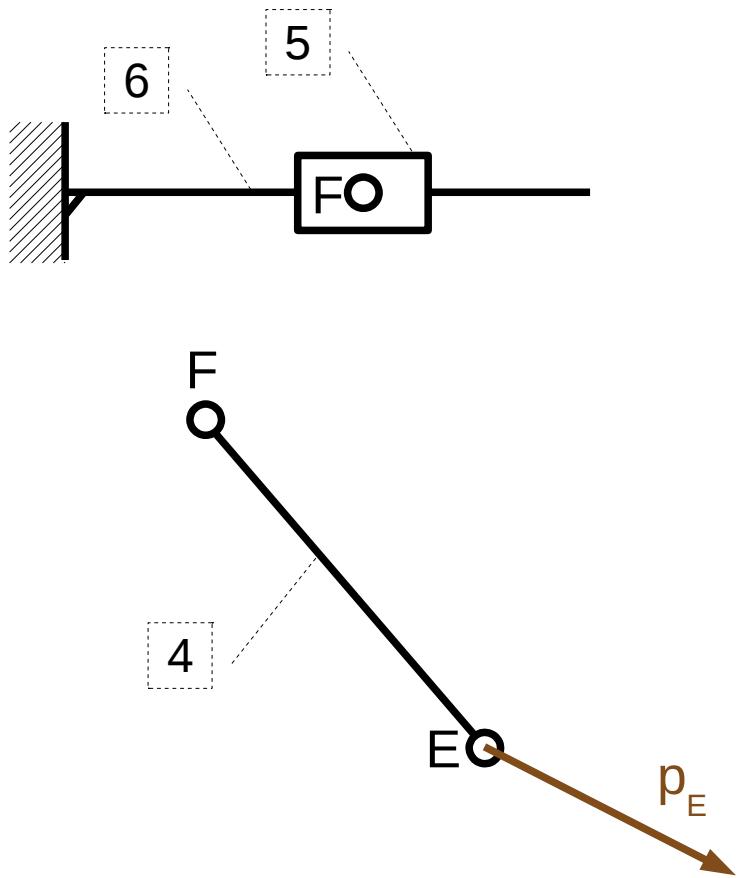

and we obtain
